Additional Information / Prior Funding History:**Project Description/Justification:**

This project will provide funding for the permitting, design, and construction of a barrier or breakwater to protect the newly installed float system at the harbor. Currently, the new floats are susceptible to damage from the prevailing south winds and are in need of protection. Additional work could include but is not limited to dredging in and around the new structure. The primary purpose of this project is to improve the safety and efficiency of harbor operations, and facilitate economic and recreational activity.
