A disparity study was completed in June 2008. The study identified and characterized the extent to which Disadvantaged Business Enterprises (DBE) participate in the procurement of Department of Transportation and Public Facilities (DOT&PF) federally assisted highway/airports/transit contracts in general construction services, professional services, supplies, and manufactured items. It also determined if DBE participation is representative of the availability of DBEs that are ready, willing and able to participate in federally assisted DOT&PF contracts. The study was required by the 9th Circuit Court of Appeals for all States within the 9th Circuit.

As a result of this study an influx of previously certified and new firms are expected to request DBE certification. In order to certify these firms, on-site visits are required under 49 CFR, Part 26 to ensure they have the resources and equipment to perform the work.

as part of the implementation of new USDOT regulations (49 CFR Part 39 due to go into effect 10/16/2010) for Americans with Disabilities (ADA) on passenger vessels. The draft regulations had been pending for 5 years with no indication from USDOT when they would be adopted. There is a need within the new regulations to effectively work with AMHS staff on how to handle ADA issues and complaints in compliance with these new regulations which requires inspection of vessels for compliant signage, messaging and reference documents. It will also require training for AMHS staff (while underway in some cases) on what to do for passengers with disabilities, what the required protocol is when an ADA complaint is received and an operational review of ADA passenger handling.

The inter-agency receipts will be paid by AMHS via a Reimbursable Services Agreement (RSA).

While not specifically mentioned, this may be most appropriately classified under safety and customer satisfaction

FY2006 Integrated Vegetation Management	Inc	95.0	81.5	8.5	0.0	5.0	0.0	0.0	0.0	1	Λ	0
Controlling fact growing brush and invasive plants along t					0.0	5.0	0.0	0.0	0.0	1	U	U

Controlling fast growing brush and invasive plants along the state highways and airports is a major problem. Warming weather patterns across Alaska is fostering more rapid growth of nuisance plant species, including invasive species not previously known in Alaska. Current mechanical and hand brush cutting practices of the 50,000 acres of roadside within the right of way are not controlling the problem.

An integrated vegetation management (IVM) program is needed to guide a change in the policy of the Department for roadside and public airport maintenance. Many transportation agencies in North America have adopted an IVM policy that coordinates a decision-making and action process that uses the most appropriate vegetation management methods and strategy in an environmentally sensitive and economically sound manner. Currently, the department doesn't have a comprehensive Integrated Vegetation Management (IVM) policy. Following an IVM program will achieve the goal of providing clearer roadsides for safer driving at lower annual cost than current efforts.

A statewide IVM coordinator is needed to develop and administer the IVM program for the department. This position will work with resource agencies and department staff to formulate a cost effective program that all available methods to control invasive plant species. This will result in new statewide policy and individual work plans to be used in the distinct geographical areas of the state.

Authorization is requested for an Airport Leasing Officer I/II position established in FY08. This position is needed to keep up with the ever increasing workload that the Juneau Office (currently a one person office) has experienced over the last several years.

The addition of this position will increase the direct contact with airport tenants and on-site airport management personnel which will lead to better oversight of airport tenant operations. Duties of this position include negotiating leases, permits and concession agreements that generate revenues.

The component will generate sufficient RSS revenues to cover this new position.

FY2010 Funding Authority for Positions Transferred from Fairbanks International Airport	Inc	258.0	251.9	2.0	3.6	0.5	0.0	0.0	0.0	0	0	0

Funding authority is requested to cover the personal services and support costs of 3 positions transferred to Statewide Aviation from the Fairbanks International Airport (FAI). The cost of these positions will be covered by existing revenue which Statewide Aviation generates through airport lease and permit revenues. Annual revenues from rural airport use are anticipated to increase 5-10% prior to FY10.

Funding is requested for the following positions that are being transferred from FAI:

PCN 25-3367, PFT Engineering Assistant II, from FAI Operations. This position will be reclassified to a PFT Transportation Planner I. Alaska's airports depend 96% on federal funds in the current program and there are outstanding federal compliance issues dating back to 1999 which are unresolved due to the lack of adequate staffing. The Transportation Planner I position will work on airports and aviation compliance planning focused on statewide coordination, facilitation, providing training, and negotiating airport and aviation related compliance with specialized Federal Aviation Administration airport and security regulations and related land use compliance issues associated with contractual grant assurances and obligations accepted and taken on by the State of Alaska in accepting federal funds for design, construction, and maintenance of airports.

PCN 25-3471, PPT Radio Dispatcher, from FAI Safety where the position will be reclassified to a PFT Airport Leasing Specialist I/II. One previously existing leasing position was cut in 2004. One previously existing leasing position was cut in 2004. Since that time Statewide Aviation has continually been backlogged and unable to provide adequate public service and important revenue generation tasks. The duties of this position will include providing airport customer service and assistance, developing lease lot plans, drafting business leases, issuing a variety of airport permits, performing field inspections and assessments of compliance with Title 17 regulations, and general aviation properties management for rural airports.

PCN 25-2997, PFT Equipment Operator, from FAI Field & Equipment Maintenance where the position will be

system	THC	05.0	0.0	0.0	05.0	0.0	0.0	0.0	0.0	U	U	U

In order to improve internal controls over self reported revenues, Alaska International Airport Systems (AIAS) is implementing a radar based aircraft activity recording system for operations at Anchorage and Fairbanks International Airports. The proposed system will provide audit capabilities for significant portions of AIAS operations revenue streams and also provide significant airfield operations system enhancements for day-to-day and emergency operations. If the transaction is not approved, a risk continues that compliant system users are charged rates and fees greater than otherwise may be required. The increase in budgeted expense will result in slight, if any increase in AIAS rates and fees. No other programs outside of the AIAS enterprise fund are impacted by this transaction.

This is an allocated portion of an overall system to be used by the international airports.

CIP receipt authority and a position type change is being requested for the following PCNs transferred into Program Development from Northern Region Construction.

Reclassification of PCN 25-1470 from a seasonal Engineering Technician to a PFT Administrative Clerk III. With the adoption of the Alaska Strategic Highway Safety Plan and the 2006/2008 National Highway Transportation Safety Administration (NHTSA) management audits, a full-time Administrative Clerk III position is needed. The most recent NHTSA audit strongly recommends expanding the Alaska Highway Safety Office staff due to the number of grants and large flow of documentation related to their program. The position will be fully supported with federal funds and provide support to a number of highway safety projects, agency partnerships and public outreach efforts.

Reclassification of PCN 25-1510 from a seasonal Engineering Technician to a PFT Planner I/II/III. The creation of

The Division of Program Development is requesting a Grants Administrator II to be assigned to the Statewide Systems section. This position would support the various grant administration functions of Alaska Safe Routes to Schools, Alaska Scenic Byways and Alaska Community Transit grant programs funded through Federal Highways Administration, Federal Transit Administration, Alaska Mental Health Trust Authority and State of Alaska.

(Position authorization is reflected in a separate change record as a result of a transfer in from Statewide Administrative Services)

Duties performed by this position will include:

<sup>-</sup>Coordinate administrative requirements of grant programs for Alaska State Transit Office, Alaska Safe Routes to Schools, and Alaska Scenic Byways.

<sup>-</sup>Ensure consistent standards for grant tracking and reporting

<sup>-</sup>Ensure federal and state program guidelines are met for the particular grant programs

<sup>-</sup>Write and review grant solicitations and recommendations for award

FY2007 Add 3 PFT Commercial Vehicle Enforcement Officers for Northern Borders Program	Inc	200.9	200.9	0.0	0.0	0.0	0.0	0.0	0.0	3	0	0

RP # 25-6-6954 added two new Commercial Vehicle Enforcement Officer (CVEO) inspectors and a CVEO supervisor for the Northern Borders Program. The inspectors will be assigned to various locations in Alaska to improve border security by increasing the number of commercial vehicle inspectors on the Alaska/Canada borders and international traffic throughout the state.

Measurement Standards and Commercial Vehicle Enforcement (MSCVE) has experienced an increase in available federal funding for border enforcement through the Federal Motor Carrier Safety Administration (FMCSA). These positions are new to the program and have specific expectations associated with them. In the proposal, MSCVE asked FMCSA for funds to continue to increase the number of safety inspections of carriers, trucks, motorcoaches, and drivers transporting international shipments entering or departing Alaska. This expansion will allow MSCVE to increase commercial vehicle enforcement with carriers and in areas where we seldom have interaction. These two additional inspectors will concentrate a minimum of seventy percent of their efforts on motorcoach/passenger carriers.

This is a relatively new project and we are still identifying areas of need and locations of international shipments. Border enforcement activities will focus on Commercial Vehicle Enforcement at international border crossings and

OMB Circular A-87 Guidelines for Indirect Project Costs												

The Statewide Design and Engineering Services component requests additional CIP receipt authority for indirect support costs that have not previously been part of the operating budget. On October 1, 2005, design projects became fully compliant with federal OMB Circular A-87 rules as required by the Federal Highway Administration. Compliance mandated that we account for some project costs as an indirect expense recoverable through the department's Indirect Cost Allocation Plan (ICAP), rather than as a direct project expense. These changes were not included in the original FV07 budget request because the department had not completed the revision of internal A-87 guidelines for consistent treatment of like costs.

Four additional fulltime engineering positions are needed for the current and projected workload in the aviation/industrial roads design group. Because of the accelerated time frame of many of the projects, in particular, the industrial roads projects, existing staff can not handle the increasing demands of Northern Region's capital improvement projects (CIP) program. We have implemented methods to help streamline project development such as establishing and maintaining a GIS database and electronic file system for all projects; and we have maximized the use of consultants. All reasonable steps have been taken to meet schedules of the current projects and four additional positions are needed to meet project workloads.

Additional expenditure authority for the Litility Permitting of					3.0	0.0	0.0	0.0	0.0	9	9	0

Additional expenditure authority for the Utility Permitting program will allow the component to cover the cost of the positions which are responsible for this program. The component has only afforded the positions in the past due to vacancies and or finding funding via revised program.

Adequate revenue is expected due to July 2009 changes in the utility permit fee rate structure in 17 AAC 15.

If additional budget authority is not received, the component will need to hold positions vacant. 1156 Rcpt Svcs (DGF) 50.0

The department is making a series of budget adjustments which will reduce the administrative burden associated with maintenance of State Equipment Fleet (SEF) shops, and eliminate duplicated funds in the operating budget.

Regional Facilities components have the responsibility of providing basic maintenance, repairs and utilities for state-owned buildings, including SEF shop space. SEF provides partial funding to regional Facilities components via Reimbursable Services Agreements (RSAs) (interagency receipts - I/A). This creates a cost to the Highway Working Capital Fund (HWCF). These costs are included in SEF's annual operating rates for vehicles and

1. Kotzebue - The new Kotzebue building is an Airport Rescue Fire Fighting (ARFF) and Snow Removal Equipment Building (SREB). This building replaces two structures that cost \$60,178 to maintain in FY06. Based on Northern Region (NR) Facilities FY06 average maintenance cost per square foot of \$7.05, the preliminary estimate to maintain this 16,225 s.f. structure is \$114,385. However, Western District costs average 15% higher due to geographical differences and logistics. This increases the estimated maintenance cost to \$131,540 per year. Subtracting the FY06 cost of buildings that are being replaced results in a net cost increase of \$71,362 per year. In addition, the risk management property liability insurance expense will also increase for the new facility by \$14,900.

Total increase for this building is \$86,262.

2. Nome - The new facility in Nome is an Airport Rescue Fire Fighting (ARFF) and Snow Removal Equipment Building (SREB). This building replaces five structures that cost NR Facilities \$114,845 to maintain in FY06. Based on NR Facilities FY06 average maintenance cost per square foot of \$7.05, the preliminary estimate to maintain this 25,500 s.f. structure is \$179,775. However, Western District maintenance costs average 15% higher due to geographical differences and logistics. This increases the estimated maintenance cost to \$206,740 per year. Subtracting the FY06 cost of buildings that are being replaced results in a net cost increase \$91,895 per

FY2009 State Equipment Fleet facility maintenance funding adjustments - net zero GF adjustments	Dec	-688.6	0.0	0.0	-688.6	0.0	0.0	0.0	0.0	0	0	0

The department is making a series of budget adjustments which will reduce the administrative burden associated with maintenance of State Equipment Fleet (SEF) shops, and eliminate duplicated funds in the operating budget.

Regional Facilities components have the responsibility of providing basic maintenance, repairs and utilities for state-owned buildings, including SEF shop space. SEF provides partial funding to regional Facilities components via Reimbursable Services Agreements (RSAs) (interagency receipts - I/A). This creates a cost to the Highway Working Capital Fund (HWCF). These costs are included in SEF's annual operating rates for vehicles and equipment. The proportion of facilities' costs related to SEF has not been kept current over the years, and there is no benefit to continue accounting for an inaccurate amount for this service.

Proposed funding adjustments are as follows:

- 1. Replace I/A with GF in regional Facilities components. This will greatly reduce the administrative burden in Facilities components by not having to split costs to multiple fund sources.
- 2. Decrement HWCF in State Equipment Fleet component. SEF will no longer have to issue RSAs to pay operating costs for their shops. This decreases expenditures from the fund, which results in lower operating rates to fleet customers.
- 3. Decrement GF from Highways and Aviation components. This reflects the reduction in SEF rates as the cost of facilities is removed from the rates.

FY2007 Anchorage Traffic Transfer of Responsibility Agreement (TORA)	Inc	100.6	0.0	0.0	100.6	0.0	0.0	0.0	0.0	0	0	0

The Department reached a new agreement with the Municipality of Anchorage on operations and maintenance of the state traffic signal system and associated items within the Anchorage area. This agreement is for \$1,333,200 in FY06, and allows for an increase based on the consumer price index (CPI), and additional signals in future years. The CPI for Anchorage last year was 2.4%. This is a reasonable escalation considering that associated costs such as electricity and commodities have escalated at a greater rate.

With no new signals added, the CPI escalation is \$100,600 and will increase the total agreement to \$1,433,800 for

FY2007 Mitigate declining Response Fund revenues Revenues to the Prevention Account of the Oil and Hazardou	FndChg Is Substa	0.0 nce Release and	0.0 <b>Prevention Fun</b>	0.0	0.0	0.0	0.0	0.0	0.0	0	0	0

Revenues to the Prevention Account of the Oil and Hazardous Substance Release and Prevention Fund (Response Fund) come from a combination of cost recovery, fines, penalties, and settlements, investment income, and a 3-cent surcharge against each barrel of crude oil produced in the state. In recent years revenues have been declining and have reached a point that they can no longer sustain all core prevention, preparedness and response functions necessary to meet the division's mission to protect public health and the environment from oil and hazardous substance releases while fostering resource development and economic growth.

Expenditures from the Response Fund must be reduced to preserve the integrity of the Fund. The Division of Spill Prevention and Response reviewed program budgets and has proposed a series of reductions, to multiple funding sources in the FY07 Governor's proposed operating budget. These reductions align expenditure authority with average actual spending in recent years - more correctly reflecting core program needs - but do not bring expenditures in line with revenues.

This transaction is proposed to replace Response Funds with General Funds and maintain core programs. In this component, General Funds will be directed toward the National Pollutant Discharge Elimination System program (NPDES).

The National Pollution Discharge Elimination Program is overseen by the Environmental Protection Agency. It attempts to reduce the amount of pollutants into the nation's water systems. The state and municipalities negotiate a permit every 5 years for their storm water discharge programs. This permit requires the Municipality and the state to perform certain monitoring and maintenance activities to assure we are meeting the intent of the law.

Approximately \$300,000 from this program is paid to the Municipality of Anchorage (MOA), through a negotiated Memorandum of Understanding (MOU) delineating the division of responsibilities as co-applicants/permitees. The remainder is used for services and upgrades necessary for the increased monitoring and maintenance activitie associated with this program. The NPDES program and the associated expense is continuous and ongoing from the signing of the MS4 permit to five years after the signing; at which time the permit will be renewed and reissued or renegotiated with changes and issued for the following five years. The process will be conducted every five years until an unknown point in time, in the future.

In the event the program falls short of the agreed upon permit requirement, the DOT&PF will be out of compliance with the NPDES Permit; the EPA has the authority to issue a Notice of Violation that could result in fines of \$27,500 per day for each violation of non-compliance with the CWA, (Federal Water Pollution Control Act

Recently published airport security regulations will soon require that Law Enforcement Officers (LEO) be stationed on the airports during screening operations. Until these regulation changes we always relied on local police to respond to the airports within 15 minutes and built our security programs around this response.

FY2009 Reduce state share of cost for airport security requirement at rural certificated airports	Dec	-89.6	0.0	0.0	-89.6	0.0	0.0	0.0	0.0	0	0	0

rms component received \$410.7 or general runds (GF) in the FYOs budget to comply with new airport security regulations that require Law Enforcement Officers (LEO) be stationed on the airports during screening operations. The Department has applied for and will receive grants from the Transportation Security Administration (TSA) to cover some of the costs of this service, and can therefore reduce GF funding by \$89.6.

FY2012 AMD: Kodiak Airport Operations  The department asked for reconsideration of the request to s	IncM <b>support op</b>	155.4 erations at the Ko	155.4 diak Airport.	0.0	0.0	0.0	0.0	0.0	0.0	2	U	U

Two additional PFT positions are required at the Kodiak Airport. Without the additional positions, operational hours will need to be reduced to prevent risk of error and accidents due to long work hours and to maintain an acceptable level of service during posted hours. The addition of two PFT positions would allow for adequate coverage for continuing current operating hours. Leave would still have to be covered by the airport manager and the highway foreman, but it would eliminate some overtime and double shifts. Improved maintenance would result from the additional personnel (\$180.4 with an offset of overtime reduction (\$25.0)).

This request for two additional equipment operators is imperative to maintain safe operations and current operating hours at the Kodiak Airport. The lack of maintenance staff at the Kodiak Airport is causing potentially hazardous conditions on the runways during certain weather events. Without additional positions and funding, a reduction in the operating hours will need to be implemented to provide safe conditions for the Kodiak aviation community.

At the request of the air carriers, an increase to the operating hours has been made at this airport steadily over the last ten years. Current airport operating hours run from 5:00 am until 11:00 pm, seven days a week. The current airport crew consists of five personnel, all working split shifts to cover these operating hours. In order for a single

Improve Level of Service

The department asked for reconsideration of this request to support increased hours and operations at the Bethel

The Bethel Airport currently serves as the hub for over 50 surrounding communities and is the busiest rural airport in Alaska. With commercial service, including Alaska Airlines, Northern Air Cargo, ERA, Hageland, Grant, Everetts and Frontier there has become a much greater need for the airport to remain open for longer hours given the amount of traffic and the limited services in Bethel for those travelers.

The department has evaluated the Bethel Airport operation in order to identify the benefits and costs required to increase airport operational hours to 24 hours a day. During this evaluation, consideration was given to each airport user and the extreme weather swings that frequent the Kuskokwim Delta. Note- Sitka is the only rural airport in the state that operates 24 hours a day service, this is due to serving as an emergency divert location in case of inclement weather in southeast Alaska.

The current cost of operating Bethel Airport is \$2.5M annually. Bethel airport's official hours of open operation currently are 6:00 a.m. to 9:30 p.m. The first crew arrives at the airport at 5 a.m. and the last crew members go home each night at 10 p.m. Increasing the hours of operation to 24 hours is estimated to cost \$900.1.

FY2012 AMD: Bethel Airport Extended Hours of Operation to Improve Level of Service (continued)

\$ 900.1

Expanding the Bethel Airport to 24 hour operation will have the following benefits to the state:

Improve the efficiency of Bethel Airport operations by:

- Continuously maintaining the airport in a state of operational readiness allows the crews to stay ahead of the airport snow removal curve. Once snow and ice build-up occurs on airport operational surfaces, it requires more time, effort and chemicals to bring the airport surfaces back to satisfactory operational conditions, compared to removing the snow and ice on a continuous basis as it accumulates.
- Spreading the work load of maintaining the airport, especially critical snow and ice control operations, to periods
  of lower aircraft traffic activity. During summer periods, maintenance crews currently need to wait for periods of
  low traffic activity during normal working hours before painting and pavement crack sealing operations can be
  undertaken
- Reduce the overtime paid from the current \$65.0 or more annually.
- Providing additional opportunity for airport maintenance and operations crew training. Currently, it is difficult to find adequate time for this important activity.
- Allows more time and opportunity for improved planning and preventive maintenance, rather than very expensive crisis maintenance and management.

Improve the safety of the traveling public, persons requiring hospital care and Bethel Airport operations by:

- Bethel Airport supports the Yukon Kuskokwim Health Corporation (YKHC) Hospital in Bethel, which serves as the primary care hospital for over 50 surrounding villages in the entire Yukon Kuskokwim Delta area of Alaska. The Bethel Airport is also the hub airport for transfer of patients requiring more specialized care to Anchorage or other medical care centers.
- Maintaining the airport in an open, safe and well maintained condition at all times to meet the 24 hour need of medical evacuation operations as well as commercial aircraft operations. At the present time some air cargo operators land at the airport during closed hours, which creates a safety concern with these operations.
- Allowing the airport to be maintained at a higher standard, which improves the safety of the traveling public, the air carriers and DOT&PF maintenance crews.
- The airport currently experiences vandalism during closed hours, which will be significantly reduced with 24 hour operations and staffing. Airport tenants have experienced vandalism to their buildings, furnishing and equipment.

Improve the Bethel Airport's response to federal regulatory agency requirements, which have substantially increased over recent years, especially since the September 2011 terrorist attack by:

- Maintaining the airport at a higher level which addresses the concerns of the FAA's Airport Certification Inspections for adequate airport condition and operational requirements, such as snow and ice control, pavement condition maintenance, aircraft rescue and fire fighting (ARFF) response and security operations.
- Maintaining a higher standard of security on a continuous basis, which better addresses the Transportation Security Administration (TSA) requirements.
- The Environmental Protection Agency (EPA) now requires a Storm Water Pollution Plan which has water testing

FY2013 New Insurance Requirements for Rural Airport Maintenance Contracts	IncM	356.3	0.0	0.0	356.3	0.0	0.0	0.0	0.0	0	0	0

Historically, there has never been any requirement for insurances in the rural airport maintenance contracts as the Division of Risk Management determined rural contractors were covered under the State's accident umbrella.

Recently a change of ideology has occurred resulting in cost increases to the contracts. All airport maintenance contracts are now required to obtain insurances in new re-bids for contracts that will expire in FY2012. Insurance requirements for Rural Airport Contractors include: Workers' Compensation, Commercial General Liability Insurance and Automobile Liability Insurance. Currently, Central Region FY2012 Contracts (67 contracts and 6 Memorandum's of Agreement - MOAs) average \$18.8 annually. Risk Management and Statewide Contracts have issued guidance stating all new bids shall contain the insurance requirements for these rural airport contracts. Requiring the insurances by private, local rural contractors will increase the contract costs dramatically. We estimate the increase to be \$15.0 per contract, per year. Insurances will be phased in utilizing the natural timeline of contract expirations and has the potential for an eventual increase of over \$1,000.0 per year.

The FY2013 budget is expected to be affected by 10 contracts being re-bid; 6 MOAs, and an estimate of 5 existing contracts to be renewed. This will affect a total of 21 contracts throughout Central Region. Using an estimate of a

Increases												

In the December 15th FY2013 Governor's budget, Central Region requested an increase to cover new insurance requirements and contract increases for rural airport maintenance contracts. Historically, the majority of the department's rural airport contractors were not covered by Commercial General Liability Insurance. Most rural airport contractors are local village residents and the majority had been unable to secure the necessary insurance coverage. The Division of Risk Management now requires all rural airport contractors to be covered by the applicable liability insurance coverage. Guidance was received in late June 2011 regarding bidding and insurance requirements. When the original estimate for the increased costs were calculated, the department was expecting an increase for each individual contract renewed to cost an estimated \$15,000. This estimate was based on the average of the most recent actual contract costs where the contractor was actually able to secure individual coverage. Since that time the department has worked with the Division of Risk Management on a more cost effective solution. This solution was put in place effective January 4, 2012 and involves an umbrella policy covering all rural airports. By developing an inclusive umbrella policy (similar to a group health insurance policy) rather than bidding insurance on each individual contract, the department has been able to significantly lower the insurance cost.

A rate was established in FY2012 by Risk Management, in the amount of \$55.00 per every \$1,000.00 in contractual cost for statewide blanket liability insurance coverage. Central Region's FY2013 airport contract costs are estimated at \$1,467.1. Risk Management's set rate of \$55.00 per every \$1,000.00 in contractual costs (\$1,467.1 X \$55.00) results in a needed increment of \$80.7.

Contracts traditionally go up in price when re-bid. FY2013 projected contract costs are \$1,467.1. The current budget for these contracts totals \$1,367.0. We are requesting an increase of \$100.1 to adequately fund these contracts.

The new methodology results in a decrease from the original request in the proposed FY2013 Governor's budget of \$175.5.

Original FY2013 Governor's increment: \$356.3

Rate of \$55.00 per every \$1,000.00 (\$1,467.1 \times \$55.00): \$80.7

Contract Shortfall: \$100.1 (\$1,467.1 - \$1,367.0) Total Need for FY2013: \$180.8
\$356.3 - \$180.8 = \$175.5 - surplus

## Highways, Aviation and Facilities (continued) Northern Region Highways and Aviation (continued)

FY2007 reverse: Mitigate declining Response

Fund revenues (continued)

and hazardous substance releases while fostering resource development and economic growth.

Expenditures from the Response Fund must be reduced to preserve the integrity of the Fund. The Division of Spill Prevention and Response reviewed program budgets and has proposed a series of reductions to multiple funding sources in the FY07 Governor's proposed operating budget. These reductions align expenditure authority with average actual spending in recent years - more correctly reflecting core program needs - but do not bring expenditures in line with revenues.

This transaction is proposed to replace Response Funds with General Funds and maintain core programs. In this component, General Funds will be directed toward the National Pollutant Discharge Elimination System (NPDES) program.

The National Pollution Discharge Elimination Program is overseen by the Environmental Protection Agency (EPA). It attempts to reduce the amount of pollutants that are released into the nation's water systems. The state and several municipalities (the Municipality of Anchorage, the Fairbanks North Star Borough, and separately DOT&PF, University of Alaska Fairbanks, the City of North Pole, and the City of Fairbanks) negotiate permits with the EPA every five years for their storm water discharge programs. These permits require the municipalities and state to perform certain monitoring and maintenance activities to assure we are meeting the intent of the federal law.

These funds provide monitoring and water sampling, inspections, inlet marking, and other maintenance activities necessary to assure water pollution minimization. The NPDES program and the associated expense is continuous and ongoing from the signing of the MS4 permit to five years after the signing; at which time the permits will be renewed and reissued or renegotiated with changes and issued for the following five years. The process will be conducted every five years until an unknown point in time in the future.

In the event the program falls short of the agreed upon permit requirement, the DOT&PF will be out of compliance with the NPDES Permit; the EPA has the authority to issue a Notice of Violation that could result in fines of \$27,500 per day for each violation of non-compliance with the Clean Water Act (CWA), (Federal Water Pollution Control Act 309 (FWPCA) 33 United States Code (USC) 1319). 33 USC 1365 FWPCA 505 allows citizen suits for non-compliance. 40 CFR 122.41(a)(2) states any person who violates section 301, 302, 306, 307, 308, 318 or 405 of the Act, is subject to a civil penalty not to exceed \$27,500 per day for each violation. With 350 known stormwater outfalls in Anchorage, and 200+ in the Fairbanks urbanized area, the program costs are minor compared to a single day fine of up to \$9,625,000.

FY2007 Add 3 equipment operators and 1 foreman for Montana

Creek and Trims maintenance stations

Northern Region Highways and Aviation Maintenance and Operations requests funding for an Equipment

Northern Region Highways and Aviation Maintenance and Operations requests funding for an Equipment Operator Foreman I, WG-52 and three Equipment Operators, WG-53, that were approved by RP 25-6-2018 in FY06.

Inc

Due to the remoteness of the Montana Creek and Trims camps and the requirement to live at the camps, we have experienced high employee turn over and difficulty recruiting qualified operators. The intent is to operate with two crews with a one week on and one week off schedule. This has proven to be an effective method of recruiting

The Trims maintenance station is currently staffed by one maintenance foreman and three equipment operators, all working a 7-day-on/7-day-off schedule in order to maintain the most difficult section of the Richardson Highway between Fairbanks and Glennallen. The camp operates with two-shifts, each with two employees. The limited staffing prohibits the foreman from overlapping with the second crew. It also creates an extreme hardship when an employee is unable to work his/her shift. For safety reasons a single employee can not be allowed to work alone in the winter thus resulting in overtime and per diem expenses for bringing another employee to the camp.

Requested funding is needed due to accumulated underfunded operating and replacement rate increases and/or adjustments in component fleet inventory.

SEF operating and replacement rates have and will continue to increase, though at a slower pace than 2007 and 2008 if fuel, steel and transportation industry costs stabilize. Higher equipment costs and dramatic increases in parts, commodities, shipping and travel (rural airport support) will influence costs in the coming rate years if the industry does not stabilize. 2010 and 2014 emission standards changes are expected to bring a 5% - 15% increase in heavy equipment purchase costs, with uncalculated maintenance cost requirements. One example is the cost of an Oshkosh snow blower engine in 2007 was \$20.0. Today's cost is \$51.0 and they are expecting the 2014, Tier IV, cost to be \$65.0 at a minimum.

FY2013 New Insurance Requirements for Rural Airport Maintenance Contracts	IncM	423.6	0.0	0.0	423.6	0.0	0.0	0.0	0.0	0	0	0

Historically, there has never been any requirement for insurances in the rural airport maintenance contracts as the Division of Risk Management determined rural contractors were covered under the State's accident umbrella.

Recently a change of ideology has occurred resulting in cost increases to the contracts. All airport maintenance contracts are now required to obtain insurances in new re-bids for contracts that will expire in FY2012. Insurance requirements for Rural Airport Contractors include: Workers' Compensation, Commercial General Liability Insurance and Automobile Liability Insurance.

Northern Region is currently funded for \$1,882.3 for 59 rural airport maintenance contracts. Final costs for FY2011 for these contracts were \$1,921.8 leaving us \$39.5 short funded. Total costs for these contracts for FY2012 are \$2,125.9, a shortage of \$243.6 for the year. For FY2013, we are estimating an additional \$180.0 for those renewing that year for a total need of \$423.6 in added funding.

There are at least two reasons for this large increase over last year. Contractors are asking for increases to their contracts as airports are enlarged or because as Alaska's CPI rises, costs in rural Alaska are increasing also. The second major reason for this increase is Risk Management and Statewide Contracts have issued guidance stating all new bids shall contain the insurance requirements for these rural airport contracts. Requiring the insurances by private, local rural contractors will increase the contract costs dramatically.

FY2012 State Equipment Fleet Rate Increase & Accumulated	IncM	87.4	0.0	0.0	87.4	0.0	0.0	0.0	0.0	0	0	0

Requested funding is needed due to accumulated underfunded operating and replacement rate increases and/or adjustments in component fleet inventory.

SEF operating and replacement rates have and will continue to increase, though at a slower pace than 2007 and 2008 if fuel, steel and transportation industry costs stabilize. Higher equipment costs and dramatic increases in parts, commodities, shipping and travel (rural airport support) will influence costs in the coming rate years if the industry does not stabilize. 2010 and 2014 emission standards changes are expected to bring a 5% - 15% increase in heavy equipment purchase costs, with uncalculated maintenance cost requirements. One example is the cost of an Oshkosh snow blower engine in 2007 was \$20.0. Today's cost is \$51.0 and they are expecting the

Additional federal receipts are not expected to be realized, and substitution with International Airport Revenue Fund authority is requested to ensure adequate funding for the Fairbanks Airport Safety component's airport police officers.

This component receives federal funding from the Drug Enforcement Agency (DEA). This funding is based upon the DEA process/program of recovery from a drug related arrest at the airport, and a percentage that is allocated specifically to the Airport Police.

The TSA screening law enforcement officers are federally funded per position based upon hours at the screening checkpoints. Reimbursement varies depending on the quantity of flights.

Adjust existing M/V Kennicott summer schedule to provide a Bellingham to Whittier express run, stopping in Ketchikan, Juneau and Yakutat before arriving in Whittier. This would provide an enhanced express run enabling passengers to continue from the Puget Sound area to the Prince William Sound area without transferring between vessels.

The Bellingham to Whittier express route is a reconfiguration of the Kennicott's added service allowing double chain trips during the summer. Instead of the southern terminus being Prince Rupert the southern terminus was moved to Bellingham. It is the contention of management that this alteration of schedule will add approximately \$2.8M in revenue while providing 2 additional sailings per month during the summer season, while still providing the necessary Prince William Sound coverage allowing the Tustumena to service the chain twice monthly. This schedule alteration has been met with support from the traveling public and MTAB as it links the populous areas of the Puget Sound area with direct access to Anchorage on a more direct route: not requiring the change of vessel. The management of AMHS has had many conversations with "Independent Travelers Associations" who are behind this change.
