FY2007 Restore state funding to fishery managers in the southeast region	Inc	400.0	400.0	0.0	0.0	0.0	0.0	0.0	0.0	0	0	0
<p><i>General fund support of salaries for the salmon fishery management biologists in southeast Alaska was reduced in prior years causing salaries to be charged between general fund and federal grants. The southeast region is the only region in the division that does not have full general fund support for these essential state management positions.</i></p> <p><i>This request restores full state funding for fishery management biologists for state management of southeast Alaska salmon fisheries. This will allow the ability of state managers to use federal funds received from the Pacific Salmon Commission to conduct salmon stock assessment projects related to implementing the 1999 Agreement of the Pacific Salmon Treaty.</i></p> <p><i>Full general fund support for the region's management biologists will allow fishery management staff flexibility when setting management priorities and policies.</i></p> <p><i>This project addresses our strategy of sustaining fisheries on stocks of fish, shellfish, and aquatic plants based on the control and regulation of harvests through responsive management systems. The ability of the division to maintain or increase the economic value of commercial fisheries and provide for subsistence uses depends on a fishery management system that responds quickly to changing circumstances and information regarding the status of the stocks being harvested. Full state funding for these front line management staff is necessary for maintaining or increasing the benefits from the state's fisheries resources.</i></p>

Adjustments: GGU												
<i>Federal Receipts: The majority of the division's federal revenue comes from the U.S. Department of Commerce/National Oceanic and Atmospheric Administration (NOAA), and National Marine Fisheries Service (NMFS). In FY08, about 88% of the total budgeted awards are from NMFS, with the remainder coming from the Department of the Interior and Department of Agriculture in support of federal subsistence programs. In FY09, the division is facing potential federal grant reductions, so additional federal authority is empty authorization.</i>												
<i>Test Fish Receipts: Test Fish Receipts authority is revenue derived from performing test fisheries to assist with fishery management. Because of legislative and fishing industry concerns, the department wants to keep its test fish authority level. Without general fund in lieu of test fish authority to fund the GGU salary adjustments, the division would have to increase its test fisheries just to bring in sufficient revenue to cover the GGU salary adjustment costs. As fish prices or run sizes decline, the percentage of the resource needed to meet budget allocations increases. As a result, the department believes it is prudent to avoid increasing test fish receipt authorization.</i>

FY2009 Implement Chilkat Lake DIDSON												
Sonar project (continued)												
<i>This general fund increment will fund the Chilkat Lake DIDSON sonar project. A new DIDSON sonar unit was purchased with capital funds early in FY08, but the division lacks the operating funds for this project. Staff will be hired to operate the sonar unit to gather accurate escapement measurements necessary to refine the existing sustainable escapement goal for Chilkat Lake sockeye salmon.</i>												
	1004 Gen Fund (UGF)	90.0										
	FY2009 AMD: Southeast Alaska salmon management biologists	181.4	181.4	0.0	0.0	0.0	0.0	0.0	0.0	0	0	0
<i>State general funds are provided in place of lost federal funds that were previously funded by the Pacific Salmon Treaty Grant. The federal funding reduction is shown in the Commercial Fisheries Special Projects component.</i>												
<i>This program provides funds for salmon management biologists. Salmon management is a core responsibility of the department both to provide for sustained yield of these important resources and to assure the benefits to the public of ongoing harvest. Management biologists are responsible for collecting basic information and analyzing stock status and fishery performance. Managers assess in-season the abundance of the salmon stocks in the fisheries for which they have responsibility and set harvest periods that will provide for efficient harvest while assuring escapement for future productivity. Management biologists also supervise staff and plan and implement research programs designed to improve knowledge of the resources and management efficiency. Alaska's healthy salmon resources and fisheries are a result of intensive hands-on in-season management conducted by experienced fishery management professionals.</i>												
<i>While federal funding has been available to support these core management positions, that source of funding has been significantly reduced. In the absence of dependable funding for basic agency personnel needs it will become more difficult to carry out fundamental agency responsibilities for conserving salmon resources and managing commercial salmon fisheries in Southeast Alaska with an annual first wholesale value in excess of \$300 million.</i>												
	1004 Gen Fund (UGF)	181.4										
	FY2009 AMD: Southeast Alaska salmon port sampling program	324.2	269.3	10.0	24.9	20.0	0.0	0.0	0.0	0	0	0
<i>State general funds are provided in place of lost federal funds for salmon projects that were previously funded by the Pacific Salmon Treaty Grant. The federal funding reduction is shown in the Commercial Fisheries Special Projects component.</i>												
<i>This program supports collection and analysis of data necessary to maximize use of salmon fishery resources as well as achieve allocation objectives. To assure sustained yield it is necessary to assess the strength of salmon runs and to determine the impacts of harvest on the runs. Program funding enables collection of data at the point where salmon are landed which helps the department assess abundance of pink salmon runs that support harvest of up to 60 million fish annually; determine harvest of Chinook stocks which helps managers keep harvests within allocation guidelines and increase harvest of hatchery returns; and collect basic data on all species of salmon needed to facilitate management. Southeast Alaska fishery managers rely on this data to make decisions in-season to set openings for the commercial Chinook and coho fisheries which harvest salmon with a value greater than \$25 million annually.</i>												
<i>While federal funding has been available to support these core management functions, that source of funding has been significantly reduced. In the absence of federal funding, it is appropriate to fund these core salmon management activities with general fund.</i>

FY2009 AMD: Southeast Alaska coho salmon indicator stocks	Inc	257.9	160.5	10.0	52.5	34.9	0.0	0.0	0.0	0	0	0
<i>State general funds are provided in place of lost federal funds for salmon projects that were previously funded by the Pacific Salmon Treaty Grant. The federal funding reduction is shown in the Commercial Fisheries Special Projects component.</i>												
<i>This program continues research on three long-term coho salmon indicator stocks in Southeast Alaska, coho escapement surveys in the Ketchikan area, and monitoring of the Ford Arm Lake sockeye population. The three coho indicator systems include the Berners River near Juneau, Ford Arm Lake north of Sitka, and Hugh Smith Lake southeast of Ketchikan. The indicator stocks form much of the core stock assessment program for management of coho salmon in Southeast Alaska. In order to permit efficient harvests and effective conservation, research on these stocks addresses detailed parameters needed to evaluate fishery management including escapement, smolt production, marine survival, age composition, and catch and exploitation rate. Coho salmon support region wide sport and troll fisheries as well as more localized net fisheries. Maintaining the coho indicator stocks is necessary to support intensive management of these stocks which provide sport and commercial harvests that often exceed three million fish.</i>												
<i>While federal funding has been available to support these core management functions, that source of funding has been significantly reduced. In the absence of federal funding, it is appropriate to fund these core salmon management activities with general fund.</i>												
1004 Gen Fund (UGF)		257.9										
FY2009 AMD: Southeast region shellfish/groundfish management and research	Inc	517.1	227.7	16.4	208.0	65.0	0.0	0.0	0.0	0	0	0
<i>State general funds are provided in place of lost federal funds for groundfish and shellfish stock assessment projects that were previously funded by the Nearshore Marine Fisheries Grant and the FMP-Extended Jurisdiction Grant. The federal funding reduction is shown in the Commercial Fisheries Special Projects component.</i>												
<i>This program funds research and stock assessment activities on shellfish and groundfish species for which life histories, reproductive rates, population estimates, and other biological parameters are completely unknown or poorly documented. Projects like these have been heavily dependent on federal grants. The projects supported by this program include dive surveys of Geoduck clams and red sea urchins, and use of a remote controlled submersible vehicle to survey and estimate the population size of demersal shelf rockfish in Southeast Alaska. Typically, lack of information has limited or prevented development of commercial fisheries on species for which insufficient information is available. In a few cases, when commercial fisheries have been allowed without this data, the stocks were rapidly overfished and resulted in complete closure. Research on rockfish is important because of the potential for the bycatch limitations on this species to limit fishing opportunities on other stocks, as has happened along the California and Oregon coasts. Alaska has been able to prevent this from occurring because of our rockfish stock assessment and fishery monitoring projects.</i>												
<i>Research has led to the development of significant new fisheries in Southeast Alaska, like the dive fisheries for Geoduck clams, sea cucumbers, and sea urchins. These dive fisheries yielded over \$5 million in ex-vessel value in 2007 and rockfish another \$600,000. With the loss of federal funding, it is important that the state provide funding for these programs. Use of the state general fund is appropriate for this core management activity.</i>

FY2006 General Fund Increment to Enhance Sockeye Management in CF Central Region	Inc	400.0	118.0	0.0	34.0	225.0	23.0	0.0	0.0	0	0	0
<i>Mark-recapture population estimation projects are needed to validate sonar counts of sockeye salmon passing upstream in the Kenai, Yentna and Copper Rivers. The primary objective of these projects is to independently estimate abundance of sockeye salmon entering the rivers, using mark and recapture methods, and compare these estimates with sonar estimates for validation purposes. Sonar technology has been used for over 20 years to count salmon in Alaska, however, there is uncertainty relative to target detection and tracking that affects the accuracy of the estimates of in-river returns using sonar. The intent is to implement a mark-recovery estimate in the Copper River, Kenai River, and the Yentna River. Once the work is completed on each of these rivers, the effort would be moved to address similar issues with other sonar based escapement estimation projects in Central Region. The benefits to the users would be more accurate forecasts, improved escapement goals, larger and more stable harvests. Forecasts are used by processors and fishers to help make decisions about the number of employees and crewmembers to hire, as well as the amount of supplies and gear to purchase.</i>

FY2007 Increase salmon stock assessment projects in CF Central Region	Inc	300.0	186.0	3.1	51.9	24.0	35.0	0.0	0.0	0	0	0
<i>A variety of salmon stock assessment projects around the state will be funded with increments contained in each Commercial Fisheries management component. These high priority projects will enable the division to set escapement goals for important stocks lacking them, improve the scientific basis of an established escapement goal, or improve the ability to monitor established escapement goals.</i>												
<i>Specific projects in the central region include increased funding for aerial surveys in Prince William Sound, reinstatement of weirs previously eliminated due to reduced funding, and increased seasonal duration of weir operation that has been reduced due to reductions in funding.</i>												
<i>These projects address our strategy of ensuring the conservation of natural stocks of fish, shellfish, and aquatic plants based on scientifically sound assessments. This increment will enable the division to improve the precision of escapement goals through the collection of high quality data over longer periods of time and for more stocks. Accurate escapement goals are essential to maintaining stable harvests or increasing harvests for subsistence uses and for commercial harvest.</i>

Adjustments: GGU												
<i>Test Fish Receipts: Test Fish Receipts authority is revenue derived from performing test fisheries to assist with fishery management. Because of legislative and fishing industry concerns, the department wants to keep its test fish authority level. Without general fund in lieu of test fish authority to fund the GGU salary adjustments, the division would have to increase its test fisheries just to bring in sufficient revenue to cover the GGU salary adjustment costs. As fish prices or run sizes decline, the percentage of the resource needed to meet budget allocations increases. As a result, the department believes it is prudent to avoid increasing test fish receipt authorization.</i>												
<i>Commercial Fisheries Entry Commission (CFEC) Receipts: In FY08, the division's CFEC receipt authority was reduced by more than \$300.0 and replaced with other funds because of projected declines in CFEC revenue in FY08 and future years. Additional CFEC receipts are not available.</i>

<i>State general funds are provided in place of lost federal funds for groundfish and shellfish stock assessment projects that were previously funded by the Nearshore Marine Fisheries Grant and the Fishery Management Plan (FMP)-Extended Jurisdiction (EJ) Grant. The federal funding reduction is shown in the Commercial Fisheries Special Projects component.</i>												
<i>These projects gather biological and life history information on a number of nearshore species of commercial importance like shrimp, scallops, crab, and various groundfish species. The species studied and the associated fishing activities occur within the waters subject to the jurisdiction of the State of Alaska. The overall purpose of these projects is to provide sustainable commercial fishing opportunities for Alaskan fishermen through scientific assessments of the productivity of harvested stocks. Some projects also evaluate various sampling methodologies in order to improve the precision of the assessment methodologies used.</i>												
<i>Funding for these grants was not included in the federal FY08 budget. Because the projects to be funded principally address species and fisheries in state waters it is appropriate to support them with general fund.</i>

FY2009 AMD: Lower Yukon River test fishery and stock assessment program (continued)												
<i>been significantly reduced. Without funding the department will be unable to maintain the test fishery and consequently will lack information used to implement timely openings of the Yukon salmon fisheries. These projects address basic information requirements for management and hence it is appropriate to fund these activities with general fund.</i>												
1004 Gen Fund (UGF)	100.1											
FY2009 AMD: Yukon River salmon management sonar program	Inc	454.3	349.3	6.5	40.0	58.5	0.0	0.0	0.0	0	0	0
<i>State general funds are provided in place of lost federal funds for salmon projects that were previously funded by the Yukon River Salmon Agreement Studies Grant. The federal funding reduction is shown in the Commercial Fisheries Special Projects component.</i>												
<i>This project has operated since 1986 and is the linchpin for the entire Yukon River salmon management program. Fishery managers use the abundance and timing information produced by this project to develop run size projections, which trigger management actions as dictated by the Yukon River salmon management plans and international treaty obligations. The abundance, run timing, and biological data provided by this project enables fishery managers to meet escapement goals, comply with treaty commitments with Canada, and provide maximum harvest opportunities for subsistence and commercial users along the entire length of the Yukon River. Information generated at the Yukon River Sonar project is shared weekly through multi-agency, international teleconferences and data-sharing with stakeholders from the lower Yukon River all the way to the spawning areas in Canada.</i>												
<i>In the past federal funding has been available to support this project but now has been eliminated. Counting fish to assess run strength in order to configure fisheries and provide escapement is central to the mission of the department. Loss of this project could jeopardize lower Yukon River commercial salmon fisheries and will make it much more difficult balance fisheries and conservation. In the absence of federal funding, it is appropriate to support this project with general fund.</i>												
1004 Gen Fund (UGF)	454.3											
FY2009 AMD: Yukon River subsistence harvest estimations	Inc	179.7	137.5	20.4	16.2	5.6	0.0	0.0	0.0	0	0	0
<i>State general funds are provided in place of lost federal funds for salmon projects that were previously funded by the Yukon River Salmon Agreement Studies Grant. The federal funding reduction is shown in the Commercial Fisheries Special Projects component.</i>												
<i>This project estimates the harvest of subsistence and personal use Chinook, summer chum, fall chum, and coho salmon from the Yukon River. Harvest information is analyzed by areas fished, including management districts and sub-districts, drainages, and by community. The project also collects demographic information about the participants in the fishery. Information collected will also document gear types utilized and areas fished for salmon. All this information is stored in a database maintained by project staff.</i>												
<i>The department is charged with providing a subsistence priority for the harvest of salmon as determined by the Alaska Board of Fisheries. Large numbers of salmon are harvested from the Yukon River by subsistence users; frequently exceeding the harvest by commercial users. Management of Yukon River salmon resources requires managers to reliably estimate annual salmon harvests, including information on the size of subsistence harvests. Basic data provided by this project is required to fulfill these management objectives. Federal funding that was</i>

<i>available for this project has been eliminated. It is appropriate to use general fund because the project addresses management needs created by state law.</i>												
1004 Gen Fund (UGF)		179.7										
FY2009 AMD: Yukon area salmon escapement surveys												
	Inc	52.9	24.3	1.9	25.7	1.0	0.0	0.0	0.0	0	0	0
<i>State general funds are provided in place of lost federal funds for salmon projects that were previously funded by the Yukon River Salmon Agreement Studies Grant. The federal funding reduction is shown in the Commercial Fisheries Special Projects component.</i>												
<i>This project funds salmon spawning escapement counts throughout the Alaskan portion of the Yukon River drainage using low-level aerial survey techniques. Salmon escapements to selected tributaries are estimated from small single-engine, fixed-wing aircraft with limited use of helicopter and/or ground surveys. Selection of tributaries to be monitored is based on their reliability as abundance indicators. In addition, selections must be spread throughout the region based on the home range of the target species. Annual documentation of spawning escapements provides 1) determination of appropriate escapement levels or goals for selected spawning areas or management units; 2) evaluation of escapement trends; 3) evaluation of the effectiveness of the management program, forming the basis for potential regulatory changes and/or management strategies; and 4) evaluation of stock status for use in projecting subsequent returns.</i>												
<i>Escapement counts are the heart of Alaska's sustainable salmon management. While federal funding was available to for this project, these funds have been eliminated. Use of general fund is appropriate for this core management activity.</i>												
1004 Gen Fund (UGF)		52.9										
FY2009 AMD: Sheenjek River chum salmon escapement sonar program												
	Inc	113.1	91.8	2.0	10.2	9.1	0.0	0.0	0.0	0	0	0
<i>State general funds are provided in place of lost federal funds for salmon projects that were previously funded by the Yukon River Salmon Agreement Studies Grant. The federal funding reduction is shown in the Commercial Fisheries Special Projects component.</i>												
<i>This project estimates fall chum salmon escapement to the Sheenjek River using sonar technology. The two primary objectives for this project are to estimate fall chum salmon escapement to the Sheenjek River and to characterize the age, sex, and length (ASL) composition of the run. Migrating salmon are counted using dual-frequency identification sonar (DIDSON). Passage estimates are communicated to fishery managers daily. Continuation of the Sheenjek River sonar project is important for managing fall chum salmon on the Yukon River. The Sheenjek River is a major producer of fall chum salmon and the project has a history going back to 1981. This project serves an important role in salmon management by providing information that is used in-season and is incorporated in post-season run reconstruction and pre-season run forecasting models. The long project history also makes it useful for examining temporal trends in wild salmon escapements.</i>												
<i>Counting escapement is essential to Alaska's sustainable salmon management. While federal funding was available to for this project, these funds have been eliminated. Use of general fund is appropriate for this core management activity.</i>

FY2010 Increase general funds to replace lost federal receipts for subsistence management projects	Inc	80.0	36.8	2.5	19.0	21.7	0.0	0.0	0.0	0	0	0
<i>This will provide general funds to replace lost federal receipts that had been funding two subsistence programs in the AYK Region through the Office of Subsistence Management.</i>												
<i>One program is the Nenana Test Wheel Fall Season Video Monitoring for \$20.0. This fish wheel is an important management tool for Tanana River subsistence, personal use, and commercial salmon fisheries. The division will benefit by receiving data to assess fall chum and coho salmon run strength and migration timing (used to prosecute fisheries), by providing staff with opportunities to develop expertise in digital video technology, and by minimizing handling time for all fish species captured by eliminating the need for holding fish in a live box.</i>												
<i>The second program is the Lower Yukon River Cooperative Salmon Drift Test Fish for \$60.0. This program will assess run timing and relative strength of fall chum and coho salmon at the mouth of the Yukon River. Accurately assessing run timing and abundance as salmon are entering the river is important to ensure sufficient numbers of fish pass to provide for the subsistence priority and escapement and to identify a surplus for commercial fisheries.</i>												
1004 Gen Fund (UGF)		80.0										
FY2010 AMD: Lower Yukon River Cooperative Summer Salmon Drift Test Fishery	Inc	18.9	11.6	0.4	2.5	4.4	0.0	0.0	0.0	0	0	0
<i>This project assesses the timing of the run and relative strength of summer chum salmon at the mouth of the Yukon River using 5.5 inch drift gillnets at four sites. Catch per unit effort (CPUE) data are calculated on a daily basis and compared to results from previous years to assess the timing and relative abundance of the run. This project is important to ensure sufficient numbers of fish pass to provide for the subsistence priority and spawning escapement while providing the surplus for commercial fisheries. Because of recent poor Chinook salmon runs which overlap in timing with summer chum, timely assessment is necessary in order to more selectively harvest summer chum salmon while conserving Chinook salmon. This project will be done cooperatively with the Yukon Delta Fisheries Development Association (a Community Development Quota (CDQ) group).</i>												
1004 Gen Fund (UGF)		18.9										
FY2010 AMD: Hooper Bay/Dall Point Offshore Salmon Test Fish Feasibility Study	Inc	67.0	53.3	3.2	5.0	5.5	0.0	0.0	0.0	0	0	0
<i>This project will test the feasibility of determining Yukon River Chinook, summer chum, fall chum, and coho salmon abundance and run timing prior to river entry and evaluate the utility of these data for informing management decisions. Fishery managers are challenged with quickly and accurately assessing the strength of the salmon runs to determine the potential for subsistence and commercial fishing opportunities before the fish pass through the area. A drift gillnet test fishery will be conducted nearshore and offshore of Dall Point, in the general vicinity of Hooper Bay, approximately 80 miles south of the Yukon River and an estimated 5-7 days travel time from the mouth of the Yukon River. The department will utilize this information as part of their in-season salmon stock assessment program. This project will be done cooperatively with the Yukon Delta Fisheries Development Association (a Community Development Quota (CDQ) group).</i>

<i>The Canadian border sonar program near Eagle assesses passage of Yukon River Chinook and fall chum salmon into Canada and allows for reconstruction of total Yukon River salmon runs. The sonar program is a core component of Yukon River salmon management and critical to evaluation of Alaskan obligations under the Yukon River Salmon Treaty. This fund source change would replace funding from the Yukon River Panel Restoration and Enhancement Fund (statutory designated program receipts (SDPR) authority). The Panel has indicated it does not intend to fund baseline operations of this sonar program beyond the 2010 season, believing that this project is a core agency responsibility. Without this funding, the project could not be operated for the entirety of the Chinook and fall chum salmon runs.</i>

FY2012 Increment to Fund Annual Research and Assessment of the Norton Sound Red King Crab Populations	Inc	50.0	0.0	0.0	15.0	35.0	0.0	0.0	0.0	0	0	0
<i>The Norton Sound red king crab fishery is the most valuable commercial fishery in the AYK Region, providing significant economic opportunity in an economically depressed area of the state, as well as year-round subsistence opportunity. ADF&G manages these fisheries in collaboration with the North Pacific Fishery Management Council (council) and conducts high-seas research on a bi-annual schedule to model population size and health, and establish guideline harvest levels. This increment would fund annual inseason research and assessment of Norton Sound red king crab populations that would help ensure sustainable populations, while maximizing harvest opportunity, would provide information to assist the Alaska Board of Fisheries and the council in making allocation and regulatory decisions, and would assist researchers and managers in refining population models and harvest strategies.</i>

FY2013 Tanana River Sonar Project Operational Costs (Funding for FY13-FY15 and terms 6/30/15)	IncT	200.0	100.0	0.0	100.0	0.0	0.0	0.0	0.0	0	0	0
<i>This will provide funding to purchase equipment needed for the Tanana River sonar project. The sonar equipment and supplies will allow for daily estimates of king, chum, and coho salmon entering the Tanana River for use inseason and postseason to manage Tanana River fisheries, and by extension, provide additional information toward managing overall Yukon River salmon fisheries. Commercial harvests could potentially be increased if salmon passage estimates were known. Runs of king, chum, and coho salmon provide for an important subsistence fishery; however, the harvest of a surplus of these fish stocks has been foregone in most years because of uncertainty surrounding the strength of the salmon runs.</i>												
<i>This project will utilize sonar to provide accurate passage estimates and drift gillnets will apportion the sonar counts to species. This method has been used with success on the lower Yukon River to provide estimates of king, summer chum, fall chum, and coho salmon. This project would conduct a site selection survey in FY2013, test the feasibility of sonar operations and test fishing in FY2013, and provide estimates of salmon passage in FY2014. Impacts to performance include more timely and accurate inseason estimates of salmon passage for making management decisions on annual run abundance, identify harvestable surpluses for subsistence and/or commercial fisheries, and maximize harvest opportunity. Users impacted include 878 commercial permit holders and about 1,500 subsistence fishing households.</i>

Commercial Fisheries (continued)												
Westward Region Fisheries Management (continued)												
FY2009 Bering Sea Crab Stocks Research (continued)												

This program funds research, stock assessment, and management activities necessary to conduct fisheries on shellfish and groundfish in the Westward Region, which includes Kodiak, the Alaska Peninsula, the Aleutian Islands, and the Bering Sea. The research and management activities include: collection and analysis of biological data required for sustainable harvests; collection and analysis of in-season fishery performance data; research and monitoring of productivity of Bering Sea Tanner and snow crab; in-season management; collection and analysis of onboard observer data from crab and scallop vessels; and preparation of analysis and comments on fishery management proposals presented to the Alaska Board of Fisheries and the North Pacific Management Council.

The shellfish and groundfish fisheries in the Westward Region are the most valuable in the state. Many commercial fisheries are managed by the State of Alaska under authority delegated by the North Pacific Fishery Management Council.

The Bering Sea/Aleutian Island (BS/AI) fisheries include the Community Development Quota (CDQ) fisheries that provide 65 Alaskan communities bordering the Bering Sea an allocation of fisheries resources worth millions of dollars.

The State of Alaska has recently implemented new groundfish fisheries from Kodiak to Adak to help small vessels diversify away from salmon and thereby support the economies of Adak, Dutch Harbor, False Pass, Pribilof Island communities of St. Paul and St. George, King Cove, Akutan and Kodiak.

Loss of funds will be likely to result in: Relinquishment of State of Alaska management of BS/AI king and Tanner crab fisheries - valued at over \$100 million annually; elimination of state management of the statewide scallop fishery, valued annually at \$4.2 million; elimination of State of Alaska management of Community Development Quota (CDQ) crab fisheries in the Bering; elimination of research needed for sustainable management of Westward Region groundfish and shellfish fisheries in State of Alaska waters valued at \$10 million; and elimination of stock assessment surveys for king crab stocks in the Aleutian Islands and Norton Sound.

While much of the harvest of Bering Sea crab and statewide scallop fisheries occur in federal waters and are managed by the state under a delegated fishery management plan, these fisheries are important to communities in the region and it is appropriate for the state to provide funding while continuing to insist that the federal government provide funding. Some of the staff engaged in management of offshore fisheries, also have responsibilities in the management of nearshore fisheries in Alaska's territorial waters.

Activities												
<i>Additional test fishery receipts authority is needed to fund Bering Sea crab research and management activities that have been historically funded by federal earmarks. This change record increases the test fishery receipts authority in the Westward Region Fisheries Management component and it is related to the federal receipts decrement in the Commercial Fisheries Special Projects component.</i>												
<i>The department receives approximately \$1 million in base funding from the U.S. Department of Commerce under the Magnuson-Stevens Act for the Bering Sea crab research and management program. The department has previously received an additional \$297.0 via federal earmark, and had hoped for \$400.0 for FY2012 to fund triennial trawl and pot surveys on Norton Sound red king crab and Pribilof Islands red and blue king crab. Survey costs for FY2012 are higher than in FY2011 and FY2010 due to the same-year scheduling of two triennial surveys in FY2012 (four king crab surveys are performed on a rotating, triennial basis, with two them, the Norton Sound and Pribilof Islands surveys, performed in the same year).</i>												
<i>With the potential elimination of federal earmarks, the department proposes to fund these important assessment surveys using test fisheries receipts generated from the crab stocks.</i>												
<i>The State of Alaska manages fisheries for king and Tanner crab in federal waters of the Bering Sea and Aleutian Islands under the auspices of a federal fishery management plan. The king and Tanner crab resources support some of the world's most valuable commercial crab fisheries generating approximately \$200 million at first point of sale in 2009. Ongoing funding for this program is needed to provide an adequate operational budget and staff resources to conduct biological research and stock surveys and to gather fishery information in the remote areas of the Aleutian Islands and Bering Sea.</i>

FY2007 Restore state funding for extended jurisdiction staff in CF Headquarters Fisheries Management	Inc	600.0	600.0	0.0	0.0	0.0	0.0	0.0	0.0	0	0	0
<i>The Extended Jurisdiction (EJ) section provides data and policy analyses needed to participate aggressively in the North Pacific Fishery Management Council and other federal fishery arenas. Fisheries prosecuted in federal waters adjacent to Alaska's state waters provided significant benefits to Alaska residents, including harvesters, processors, and business owners, but often policy decisions arrived at by federal managers are not in the best interest of Alaskans. In support of the department's representation on the North Pacific Council and the federal fishery management process, the EJ section is essential to identifying, developing, and presenting the state's position on a wide variety of biological, economic, and social issues.</i>												
<i>Currently salaries and support for the EJ section are federally funded. This request will provide full state funding, and will allow the use of the federal funds to conduct biological and economic assessment projects related to state interests in federal fishery management issues.</i>												
<i>This addresses our strategy of sustaining fisheries on stocks of fish, shellfish and aquatic plants based on the control and regulation of harvests through responsive management systems. Securing the maximum in social and economic benefits to Alaskans from the fisheries occurring off the shores of Alaska within the Exclusive Economic Zone of the United States requires effective representation and advocacy by the state within the North Pacific Management Council.</i>

FY2009 Restructure of the PNP/Mariculture program	Inc	261.5	249.7	7.0	3.0	1.8	0.0	0.0	0.0	0	0	0
<i>This general fund increment will support the restructuring of the division's private nonprofit (PNP) and mariculture planning and permitting functions, mainly by adding three staff members with one serving as a regional supervisor. The division currently has only five employees responsible for planning and permitting for the salmon hatcheries and the aquatic farming industry, which is inadequate to meet the needs of this section and assigned tasks. The regional supervisor will provide a senior policy leader for the section, especially given the sensitive public policy issues that the section encounters. This restructuring will bring together the pathology, coded wire tag, and age laboratories, along with PNP and mariculture section, under a single leadership position.</i>												
1004 Gen Fund (UGF)		261.5										
FY2009 AMD: Shellfish / groundfish management and research	Inc	569.2	383.5	70.3	61.5	53.9	0.0	0.0	0.0	0	0	0
<i>State general funds are provided in place of lost federal funds for projects that were previously funded by the American Fisheries Act (AFA) National Standards 4 and 8 Grant and the Fishery Management Plan (FMP)-Extended Jurisdiction (EJ) Grant. The federal funding reduction is shown in the Commercial Fisheries Special Projects component.</i>												
<i>This program provides funding for senior scientific and biometric staff that makes necessary contributions to the management of important crab and groundfish fisheries in the Gulf of Alaska and Bering Sea. It also supports staff that ensures effective participation by the State of Alaska in regulating federal fisheries off Alaska that harvest billions of dollars of fishery resources annually.</i>												
<i>Scientific staff funded by the program are responsible for developing the analytical methods and biometric models upon which the management of the Bering Sea/Aleutian Islands (BS/AI) crab fisheries is based. The fisheries scientist also supervises investigations regarding aspects of the life history of BS/AI crab stocks that are believed to determine the productivity of crab stocks in the Bering Sea and hence the allowable harvest levels. Also funded are projects to establish a genetic baseline for important crab stocks in the Gulf of Alaska and Bering Sea.</i>												
<i>The program also coordinates the Alaska Department of Fish and Game's participation in the North Pacific Fishery Management Council process, including policy analysis, biological analysis, and regulatory analysis and review. Funding is also provided for staff responsible for providing information to a wide variety of users regarding commercial harvests, ex-vessel and wholesale values of harvests, participation in commercial fisheries, and historical information regarding individual harvesting and processing activities. The information management staff ensures compliance with all State statutes and regulations protecting confidential information.</i>												
<i>Failure to fund this program will result in the loss of highly qualified staff. Loss of the scientific personnel that determine sustainable harvest levels will result in reduced harvests of Bering Sea red king crab, snow crab, and Tanner crab, and lead to the termination of assistance to the ADF&G regional offices for the development of stock assessment methods used in regional and area offices. The loss of the Extended Jurisdiction Coordinator, who is the Commissioner's alternate on the North Pacific Fishery Management Council, will compromise the State's ability to affect policy in both Alaska and the Pacific Northwest, including policies affecting recreational and subsistence users. The economic impact to Alaskan communities will be many millions of dollars. Furthermore,</i>

FY2007 Convert remaining authority from Fish and Game Dedicated funds to Fish and Game Non-dedicated funds													
<i>The Fish and Game fund authority within the Commercial Fisheries Division was split between dedicated and non-dedicated in FY06. All of the authority within the division was to be converted to non-dedicated, but this amount was overlooked. This fund change now converts the remaining amount to non-dedicated.</i>													
		1024 Fish/Game (Other)	-11.3										
		1194 F&G NonDed (DGF)	11.3										
FY2007 Increase funding for statewide groundfish and shellfish projects in the CF Special Projects													
	Inc		600.0	420.6	21.3	101.3	56.8	0.0	0.0	0.0	0	0	0
<i>Shellfish and groundfish management and stock assessment have received relatively little state funding compared to their value of approximately \$200 million annually. The harvest of these species is important to resident Alaskan fishermen and processors, because these species provide product to harvest and process during the times of the year when salmon are not running.</i>													
<i>This will provide additional funding for biometric support for survey design and data analysis in various shellfish programs, shrimp stock assessments, and biological sampling in the red sea urchin fishery. This will also fund shrimp stock assessments in Prince William Sound, Cook Inlet, and the Westward Region; and biological catch sampling, data analysis, and population assessment for crab species in southeast Alaska, Prince William Sound, Cook Inlet, and the Westward Region. In addition, this increment will fund a trawl survey for the Norton Sound Red King Crab fishery, which is the most valuable fishery north of the Yukon River.</i>													
<i>This request will enable the division to develop new or more accurate reproductive goals for shellfish and groundfish stocks and improve the ability of the department to manage harvests to take the maximum biologically sustainable harvest while protecting the reproductive potential of the stocks.</i>													
<i>These projects address our strategy of ensuring the conservation of natural stocks of fish, shellfish, and aquatic plants based on scientifically sound assessments. This increment will enable the division to improve the precision of estimates of the number of finfish or shellfish needed in a specific stock to maintain biological productivity. Accurate estimates of spawning populations needed to maintain productive populations are essential to maintaining stable harvests or increasing harvests for subsistence uses and for commercial harvest.</i>

FY2007 AMD: Pacific Salmon Commission, Northern Fund Committee projects	Inc	221.1	77.3	3.4	36.5	103.9	0.0	0.0	0.0	0	0	0
<i>Statutory Designated Program Receipts authority is needed to receive funding from the Northern Fund Committee of the Pacific Salmon Commission for the following two projects.</i>												
<i>The project "estimating chinook stock composition in Southeast Alaska fisheries" will extend the current use of genetic stock identification to estimate the stock composition of the troll and sport fishery harvests of Chinook salmon in Southeast Alaska until the close of the late winter troll fishery in 2007. Currently funded analyses will end in the spring (sport fishery) and summer (commercial troll fishery) of 2006. This project will provide estimates of the stock composition of Chinook salmon harvests in selected Southeast Alaska fisheries for each stock group present for an additional year. Stock composition estimates will also be provided for the District 108 and 111 directed net fisheries.</i>												
<i>The project "electronic collection of escapement data" expands the capabilities of an electronic data collection system developed under an existing 2005 Northern Fund project (electronic collection and transfer of salmon fishery biological data), to include collection of biological data for salmon escapements. Electronic data collection methods can improve data reliability over paper data forms through relational database constraints, restrictive functionality, error checking during collection, and data validation during data transfer. Under the 2005 Northern Fund project, ADF&G staff used mobile computing technologies to build a system for electronically collecting biological data during commercial catch sampling, and transferring field data to central databases. Although the same crews often sample both catches and escapements, the field situations for escapement sampling require different software functionality and more durable hardware. This proposed project would fully round out a set of data collection automation applications for commercial salmon fishery port samplers, and purchase necessary equipment for testing and development.</i>												
1108 Stat Desig (Other)		221.1										
FY2007 AMD: Increase SDPR authority to allow the collection and expenditure of aquatic farm survey fees	Inc	415.0	0.0	0.0	415.0	0.0	0.0	0.0	0.0	0	0	0
<i>An aquatic farm survey fee has been established and put into department regulation effective November 25, 2005. AAC 05.41.220 allows for the collection of survey fees for a subtidal survey at a rate of no more than \$5,000 per aquatic farm, per day and for an intertidal survey at a rate of no more than \$2,000 per aquatic farm, per day. AS 16.05.050(16) is the statute to establish and charge fees.</i>												
<i>The division must be able to collect these fees in order to conduct the site surveys. Currently AS 37.05.146 (non general fund program receipts) authority is insufficient for this purpose. The potential exists for the department to conduct a maximum 83 surveys (\$5,000 x 83 sites is \$415,000). An FY06 Supplemental has been submitted to change the language and to provide SDPR authority to enable the department to receive and expend survey fees. The number of site surveys in any year will depend on applications received, available dive staff to conduct the surveys, and weather conditions. Therefore, the number of sites to survey may change at any time.</i>

FY2011 Fund Source Change from Federal to GF for the Yukon River Chinook Stock ID Project in the AYK Region (continued)												
<i>Federal receipts are no longer available for this Yukon River Chinook stock ID project and they are being replaced with general funds. The project applies genetic stock identification to Chinook salmon fishery harvests by collecting and analyzing individuals from commercial, subsistence, and test fisheries throughout the mainstream Yukon River. Samples from lower river commercial and/or test fisheries will be analyzed in-season.</i>												
<i>Successful management of mixed stock fisheries depends in large part on reliable indexes of abundance and run timing, and estimates of stock composition in the run and harvest. Since 2004, the stock composition of Chinook salmon harvests in the subsistence and commercial Chinook fisheries of the Yukon River has been obtained by genetic stock identification based on the available baseline of DNA markers. The primary application of this information is to determine the proportion of Canadian-origin Chinook salmon in fishery harvests in the U.S. waters of the Yukon River, which has ramifications for the management of fisheries both in the U.S. and Canada; there are treaty-defined goals for passage of Chinook salmon into Canada. Further, knowing the abundance of Canadian-origin Chinook salmon in-season can improve management decisions made during the fishing season. These data are also used to construct brood tables and make run size projections.</i>

FY2012 Correct Unrealizable Fund Sources for Personal Services Increases	FndChg	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0	0	0
<i>Several fund sources within the Commercial Fisheries Special Projects component will not have sufficient revenue to support COLA, geographical differential, and health insurance increases. Therefore, a fund source change to General Funds is required for the following fund sources.</i>												
<i>Federal Receipts authority: The division receives several important grants from the National Marine Fisheries Service. Examples include Pacific Salmon Treaty, Bering Sea Crab Research, and the Federal Subsistence program. Potential reductions of between \$38.5 and \$158.9 are expected within each of these programs if General Fund is not provided in lieu of the unrealizable federal receipts authority. Reductions within the Pacific Salmon Treaty grant will include shifting grant personnel onto General Funds already allocated to other programs due to treaty obligations having to be met. It is anticipated that some sockeye salmon stock assessment projects would be eliminated or reduced, which would result in more conservative management of these fisheries. The Bering Sea Crab Research grant reductions would include at-sea observer data would not be reviewed, edited, and distributed to analysts and managers in time to assess stock status and determine total allowable catches</i>

Commercial Fisheries (continued)												
Commercial Fisheries Special Projects (continued)												
FY2012 Correct Unrealizable Fund Sources for												
Personal Services Increases (continued)												
<i>according to the state and federal fishery management schedules and processes; snow crab specimens collected for annual assessment of reproductive potential would not be fully processed, which would affect harvest strategies needed for developing a rebuilding plan for this stock. The federal subsistence program would likely see elimination or reductions of a variety of fishery assessment projects. In the absence of all or part of the information provided by these programs, more conservative management would be necessary and may result in both commercial and subsistence fisheries being curtailed or closed.</i>												
<i>General Fund/Program Receipts (GF/PR) authority: The GF/PR category includes revenue streams coming from commercial crew license revenue for statewide projects and dive tax assessments for projects in Southeast Alaska. In order to maintain current project levels without concern for insufficient revenue, General Funds are required to support these personal services increases.</i>												
<i>Interagency (I/A) Receipts authority: These receipts are related to Reimbursable Services Agreements (RSA). Increasing I/A receipts authority is in essence, empty authorization unless increments are provided to each RSA requesting agency as well. The empty authorization results in the servicing agency absorbing the increased administrative cost which translates to a reduction of programmatic funds.</i>												
<i>Capital Improvement Project (CIP) Receipts: The division receives funding from several capital projects, including the Pacific Coastal Salmon Recovery Fund (PCSRF). This program has limited discretionary funds available; therefore, an increase in CIP authority will not translate into additional project funding to cover the personal services increases. These projects provide numerous benefits, including monitoring of salmon harvest and escapements, habitat protection and restoration, and fulfillment of some of the monitoring obligations in the Pacific Salmon Treaty. Elimination or reduction of these projects would result in diminished salmon populations and reduced harvest opportunities for subsistence, sport, and commercial fisheries.</i>												
<i>Statutory Designated Program Receipts (SDPR): The division has numerous contracts from non-state and non-federal agencies. The division's largest program within the SDPR category is the Alaska Fishery Information Network (AKFIN) grant. An approximate reduction of \$108.0 is expected in the AKFIN program without a fund source change to General Funds. The remaining amount of this fund change would support several other contracts important to the division. AKFIN program reductions would include support for fishery economic analysis on groundfish and shellfish fisheries and an RSA to the Department of Labor and Workforce Development for crew member employment estimates. It would also be necessary to eliminate funding for research database development, which is in the process of "rescuing" historical data that does not reside in a database. These reductions will diminish the State's ability to protect coastal communities and Alaska residents from changes to employment, earnings, and related community impacts associated with current management plans and any proposed changes to those plans under consideration by the North Pacific Fisheries Management Council and the Alaska Board of Fisheries. The loss of funds for research database development will jeopardize historic data that is necessary to identify longterm changes in fishery performance and resource productivity.</i>

FY2012 Delete Excess Federal ARRA Authority	Dec	-50.0	0.0	0.0	-50.0	0.0	0.0	0.0	0.0	0	0	0
<i>Federal American Recovery and Reinvestment Act authority is in excess to the needs of the division and is being reduced. The authority provided revenue to the Alutiiq Pride Hatchery to recoup losses incurred in feed production. The project is complete.</i>												
1212 Stimulus09 (Fed)		-50.0										
FY2012 AMD: Dive Fishery Program Support	IncM	50.0	0.0	0.0	50.0	0.0	0.0	0.0	0.0	0	0	0
<i>Per Alaska Statute 43.76.200, the department develops an annual operating plan in cooperation with the Southeast Alaska Regional Dive Fisheries Association (SARDFA). Each year an operating plan and corresponding budget is developed where funding is based upon the total value of assessments received for the landed value from the sea cucumber, geoduck and red sea urchin fisheries. Currently, these industry imposed assessments are 5% for sea cucumbers and 7% for geoduck and red sea urchins.</i>												
<i>Over the last few years, both the market price and harvest levels for geoduck have increased substantially, from approximately 300,000 pounds at \$.41/pound in 2002 to over 900,000 pounds at \$.27/pound in 2010. The SARDFA annual operating plan has a cap relative to the amount of receipt authority appropriated to the department by the legislature. The amount of revenue now generated by these assessments is exceeding the department's authority and as a result the full distribution of assessment revenue cannot be incorporated in the annual operating plan and associated budget.</i>												
<i>It is anticipated that the price per pound for geoduck will continue to rise and as a result, the amount of receipt authority for this project needs to increase by \$50.0. The total general fund program receipts authority for this project will be \$555.7.</i>												
<i>This request was inadvertently omitted from the FY2012 Governor's Budget released December 15, 2010.</i>												
1005 GF/Prgm (DGF)		50.0										
FY2012 AMD: Bering Sea Crab Research and Management Activities	Dec	-400.0	0.0	0.0	-400.0	0.0	0.0	0.0	0.0	0	0	0
<i>Test fisheries receipts authority is needed to fund Bering Sea crab research and management activities that have been historically funded by federal earmarks. This change record reduces the federal receipts authority and is related to the test fisheries receipts increment in the Westward Region Fisheries Management component.</i>												
<i>The department receives approximately \$1 million in base funding from the U.S. Department of Commerce under the Magnuson-Stevens Act for the Bering Sea Crab Research and Management Program. The department has previously received an additional \$297.0 via federal earmark, and had hoped for \$400.0 for FY2012 to fund triennial trawl and pot surveys on Norton Sound red king crab and Pribilof Islands red and blue king crab. Survey costs for FY2012 are higher than in FY2011 and FY2010 due to the same-year scheduling of two triennial surveys in FY2012 (four king crab surveys are performed on a rotating, triennial basis, with two them, the Norton Sound and Pribilof Islands surveys, performed in the same year).</i>												
<i>With the potential elimination of federal earmarks, the department proposes to fund these assessment surveys using receipts generated from crab stocks.</i>												
<i>The State manages fisheries for king and Tanner crab in federal waters of the Bering Sea and Aleutian Islands under the auspices of a federal fishery management plan. The king and Tanner crab resources support some of the world's most valuable commercial crab fisheries generating approximately \$200 million at first point of sale in 2009. Ongoing funding for this program is needed to provide an adequate operational budget and staff resources</i>

	FY2006 Increase general funds to Support Sockeye Mgmt in Central Region by funding the Genetics Lab	Inc 500.0	140.0	20.0	40.0	300.0	0.0	0.0	0.0	0	0	0
<i>Two large-scale genetic stock identification projects would be conducted in Upper Cook Inlet and Bristol Bay. The intent is to fully implement an on-going genetic stock identification program in Bristol Bay (\$250.) and in Upper Cook Inlet (\$250.0). These two projects are being included in the Fisheries Development component and used by the Genetics Laboratory to support fishery management of sockeye salmon in these two important areas of Alaska. Discrete stock management has been an important objective in both of these sockeye salmon fisheries. Mixed stock harvests of sockeye salmon occurs within each district and section in Bristol Bay and Upper Cook Inlet. This remains a contentious issue among user groups and makes escapement goal definition and forecasts difficult for fishery management. Development of genetic stock identification for use in Upper Cook Inlet and Bristol Bay sockeye management would provide more accurate and precise estimates of catch contributions than are currently available. This information would be critical to both ADF&G and the Alaska Board of Fisheries to modify existing management plans, develop new plans, develop harvesting strategies, and improve the quality of brood tables, which are used to set escapement goals and forecast future returns. The benefits to the users of genetic stock identification are that it provides a better understanding of the contributions of various salmon stocks to fisheries. Accurate stock identification and improved stock assessment capability can be scientifically incorporated into management regimes to provide sustainable and stable commercial, recreational and personal use fisheries that harvest wild stocks.</i>

FY2007 Increase Fish and Game Funds for the Sport Fisheries economic satisfaction survey	Inc	300.0	0.0	0.0	300.0	0.0	0.0	0.0	0.0	0	0	0
<i>In addition to obtaining information on participation, catch, and harvest, the Division of Sport Fish and other resource decision-makers need information on the socio-economic aspects of recreational fishing in Alaska in order to maintain and improve recreational fisheries in Alaska and to meet the statutory goal of optimizing the social and economic benefits to the angling public and the state. To address these needs the Division will conduct an economic survey in FY2007. This effort will allow the Division to continue to successfully address our target of realizing a positive trend in trip related expenditures, as measured by the National Survey of Hunting and Fishing. Currently, the Division is reliant on this national survey as its only index of the Division's primary measure of value of recreational fishery to the state. Via this increment, the Division will provide an independent and more timely index of economic value.</i>												
<i>Fishery managers and regulatory decision-makers require information on the motivations, preferences and relative satisfaction of the various angling publics who participate in Alaska's diverse recreational fisheries. The Division conducted its first statewide angler market segmentation survey in 1997 to obtain baseline information on Alaska's angling publics (resident and nonresident), with the goal of periodically repeating the survey to assess trends or changes in the preferences and satisfaction of anglers relative to the mix of recreational fishing opportunities managed by the Division. To address this need, the Division will conduct an angler satisfaction survey in FY2007. This effort will help meet our target of increasing the recreational fisheries experiences satisfaction level of anglers to 75%. The last index of angler satisfaction was in 1997. Via this increment, the Division will evaluate current satisfaction.</i>

FY2008 AMD: Risk management cost savings	Dec	-0.7	0.0	0.0	-0.7	0.0	0.0	0.0	0.0	0	0	0
<i>According to Department of Administration, the risk management premium for vessels is going down in FY08 and the Department of Fish and Game's share of the statewide reduction is \$14.5. Risk management costs for vessels are spread across three divisions within Fish and Game. Commercial Fisheries incurs approximately 90% of the costs or \$13.1. Commercial Fisheries uses general funds to cover risk management costs. Sport Fisheries and Wildlife Conservation each incur approximately 5% of the risk management premium cost on vessels or \$0.7 for each division. Both divisions use Fish and Game fund to cover their risk management costs.</i>

FY2009 AMD: Halibut Data Collection program	FndChg	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0	0	0
<i>State general funds are provided in place of lost federal funds for halibut data collection that were previously funded by the Halibut Data Collection Grant.</i>												
<i>The Department has provided estimates of the number of halibut harvested in recreational fisheries statewide since 1977. While federal funding has been provided to collect this Halibut data, the NOAA funding has been eliminated in FY09. The department has conducted sampling of the recreational halibut harvest at numerous ports throughout Southeast Alaska since the early 1980s and in Southcentral Alaska since the late 1980s. This data is used to estimate recreational harvest by weight and is needed by the International Pacific Halibut Commission for assessment of the halibut stock and setting of catch limits, and by the North Pacific Fishery Management Council for allocation and management of the halibut resource among user groups. Recreational fishing for halibut is a primary summertime activity and a source of food throughout coastal Alaska. Over 460,000 halibut (7.9 million pounds) were harvested in Alaska by all sport anglers in 2006. Halibut fishing and related tourism infuse millions of dollars to the economies of small coastal towns. Nearly 800 sport charter businesses provided halibut fishing for 184,473 clients statewide in 2004. The halibut fishery provides jobs in the charter or fishing lodge industry, lodging and food service, boats and fishing supplies, and related service industries.</i>												
<i>Management of recreational fisheries within harvest guidelines, and allocation of halibut among sport and commercial harvesters must be based upon the best scientific information possible to maximize economic benefits to the State of Alaska. Management or allocation decisions made without the most current and reliable scientific data could result in lost opportunity to anglers (both resident and nonresident). The state has a substantial interest in ensuring that appropriate management decisions are made for the halibut fisheries.</i>

FY2012 Correct Unrealizable Fund Sources for Personal Services Increases	FndChg	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0	0	0

The following other fund sources do not have revenues to support the pay and health increases so the fund sources need to be changed to General Funds.

Federal Receipts: Sport Fish Restoration Program (Dingell-Johnson Wallop-Breaux) comprise 73% of the Sport Fish Division's federal receipts and are derived from the collection of a federal excise tax on the sale of sport fishing-related equipment and fuel. The funds are annually apportioned to the division using a formula-based method, the amount of which fluctuates from year to year based on the amount of taxes that were collected. In FY12, the division expects its annual apportionment will be 2-3% less than was received in FY11 due to a reduced amount of quarterly excise tax collection receipts, the final spend-down of a boating safety account within the national Sport Fish Restoration Trust Fund (which had resulted in approximately an additional \$1.0 million/year to the division's annual apportionment over the past 3-4 years), and the financial forecast of entities responsible for administering the trust fund (U.S. Department of Taxation and Revenue and U.S. Fish and Wildlife Service).

Based on the anticipated decline in the division's annual apportionment that is already fully allocated, an increase in federal receipt authority will not make it possible to absorb personal services increases because it does not translate into additional money. If the division does not receive General Funds it will need to absorb these increases in Fish & Game Funds which will result in significant programmatic cuts and reductions to staff.

Interagency (I/A) Receipts: These receipts are related to Reimbursable Services Agreements (RSA). Increasing I/A receipt authority is in essence, empty authorization unless increments are provided to each RSA requesting agency as well. The empty authorization results in the servicing agency absorbing the increased administrative cost which translates to a reduction of programmatic funds.

Fish & Game Fund: The Sport Fish Division's Fish and Game Fund projection through FY12 continues to indicate a decline in the fund balance despite concerted efforts in FY08, FY09 and FY10 to arrest that trend through the elimination of redundancies and inefficiencies as well as significant reductions in spending. This decline is

<i>attributable to reduced license sales and king salmon stamp revenue contrasted with the absorption of increased operational and overhead costs, new hatchery operational costs and the cost of annual step increases over the past several years. To alleviate the strain on Fish and Game Funds, the division identified areas that were transferred to the Sport Fish Restoration Program (Dingell-Johnson Wallop-Breaux) which is the division's primary funding source representing 73% of the division's federal receipt authority. In addition, the division cut travel 10%, reduced staff training, and eliminated certain programs. Declining license sales contrasted with increased costs absorbed by the division will spur additional programmatic cuts if the division does not receive General Funds to cover these increased costs.</i>												
<i>Capital Improvement Project (CIP) Receipts: The division receives funding from a variety of capital projects, although primarily the Pacific Coastal Salmon Recovery Fund (PCSRF) and Alaska Sustainable Salmon Fund (AKSSF). Under the PCSRF and AKSSF programs the total available funding is decreasing and there are limited additional discretionary PCSRF and AKSSF funds available, so an increase in CIP authority will not translate into additional money.</i>

FY2012 Reduce Excess Fish and Game Fund Authority Due to Unrealized Revenues	Dec	-1,500.0	0.0	0.0	-1,500.0	0.0	0.0	0.0	0.0	0	0	0
<i>The Sport Fish Division's Fish and Game (F&G) Fund projection through FY12 continues to indicate a decline in the fund balance despite concerted efforts in FY08, FY09, FY10, and FY11 to arrest that trend through the elimination of redundancies and inefficiencies as well as significant reductions in spending. This decline is attributable to reduced license and king salmon stamp sales contrasted with the absorption of increased operational and overhead costs, new hatchery operational costs and the cost of annual step increases over the past several years. The division is reducing excess authority due to unrealized F&G Fund revenues.</i>

<i>Data from this program supports management of the Chinook salmon fisheries in Southeast Alaska which contributes substantial (>\$150.0 million Sport and Troll in 2007) economic benefits to the regional economy. This program provides critical information necessary to manage and implement the Chinook salmon troll (1,100 permit holders), gillnet (350 permit holders), and recreational fisheries (110,000 anglers) under the guise of the Pacific Salmon Treaty. The continual decline of Fish and Game (license fees) and Sport Fish restoration Federal Aid revenues has caused annual reductions in this program since 2005; restoring this program will result in optimizing benefits from this resource to all users in Southeast Alaska.</i>

<i>of these funds to each State and American Territory is formula driven. The division is guaranteed to receive a SFR apportionment each year, however the amount fluctuates depending on a variety of factors (federal tax receipts on fishing tackle, boats, fuel and other commodities) resulting in unpredictability. The current national economic situation foretells that a decrease in SFR dollars coming to Alaska is all but certain. The division develops its annual budget requests based on projections versus actual amounts because of timing. As a result, there is often a difference between the amount that has been requested and the amount that is apportioned. An increase in federal receipt authority does not translate into additional money.</i>												
<i>Fish & Game Fund (FGF): The Division's FGF projection through FY12 continues to show a declining fund balance. This reality is despite concerted efforts initiated in FY08 to arrest this trend by converting project funding from FGF to Dingell-Johnson (federal) where appropriate. The trend is attributable to reduced license revenue (CY06 and CY08) contrasted with increased project costs (annual step increases, equipment, fuel, electricity and administrative) in addition to attempting to absorb operational costs for a new sport fish hatchery. In light of this environment, the division continues to employ a fiscally prudent approach to projecting FGF revenue. If the division does not receive General Funds for dampening these programmatic shortfalls, it will spur additional programmatic cuts.</i>												
<i>Interagency (I/A) Receipts: Increasing I/A receipt authority is in essence, empty authorization unless increments are provided to each requesting agency as well. Wildlife Conservation (continued)												
FY2007 CC: Remove 1/2 of increment for Research Wildlife Species Pending Listing as Threatened in Wildlife Conservation (continued)												
<i>This increment addresses our strategy of - 0% change in the number of species under state management designated as threatened or endangered in Alaska from the 2003 level.</i>												
<i>A Wildlife Biologist II in Anchorage will be added for field work on waterfowl species.</i>												
1004 Gen Fund (UGF)		-125.0										
FY2007 Replace increment for Big Game Management and Research in Wildlife Conservation	Inc0TI	1,330.7	1,330.7	0.0	0.0	0.0	0.0	0.0	0.0	2	0	0
<i>This request will provide the Division with the means to: 1) conduct intensive management programs to restore depleted game populations and increase hunting opportunities, 2) assess the population status of key wildlife populations to provide the greatest allowable harvest, 3) inform and educate Alaskans on the role of consumptive uses in managing Alaskan wildlife populations, and 4) recruit and retain new hunters.</i>												
<i>This increment addresses our strategies of collecting scientifically sound information on wildlife populations in Alaska; providing up-to-date biological information and recommendations to the Board of Game and state advisory committees; and increasing low or declining ungulate populations identified under the intensive management law in areas impacted by predators to provide for increased human harvest.</i>												
<i>The frequency of population surveys for big game species of greatest human demand (moose, caribou) will increase to biannually and in some cases, annually. The increase in frequency will maintain a schedule that provides up to date information to the Board of Game as it rotates meetings around the state. Comprehensive surveys of sheep and mountain goats will be accomplished for the first time in three years. They will then begin a rotational schedule for survey activity.</i>												
<i>The Division will expend funds on field surveys and research activities. The tools for survey and research includes: aircraft and helicopter charters, radio and satellite collars for tracking purposes, animal capture drugs, aircraft maintenance, and hazard pay for staff, pilots, and staff. The Division curtailed operating expenditures by its regions in late FY04 by leaving staff positions vacant and forgoing the charter of aircraft, purchase of aviation fuel, and the purchase of tracking equipment. This request will permit the Division to step up wildlife management and research programs in order to enhance wildlife populations and provide more hunting.</i>												
<i>Ten new positions are requested: Wildlife Biologist II - 3, Fish & Wildlife Technician IV - 7.</i>

FY2008 Replace a One-Time Funding source (Investment Loss Trust Fund) with General Funds	Inc	1,330.7	0.0	0.0	0.0	0.0	0.0	0.0	1,330.7	0	0	0
<i>In FY07, \$1,330.7 was added to the Wildlife Conservation component to augment existing wildlife management programs, especially survey and inventory activities. These activities are crucial for making regulatory recommendations and managing hunts, and form much of the basis for decisions regarding predation management programs. Survey and inventory work has been in decline in recent years due to increasing costs and reduced revenues. The FY07 increment was a much-needed reinforcement to long term game management activities. The Legislature made the increase a one-time fund source (Investment Loss Trust Fund) rather than a continuing source such as General Fund. The general population of Alaska should contribute to the public</i>

FY2008 Replace a One-Time Funding source (Investment Loss Trust Fund) with General Funds (continued)												
<i>services provided by the Division. The most efficient funding source for that contribution is the General Fund.</i>												
<i>The Division of Wildlife Conservation requires operational funding adequate to overcome a multi-million dollar shortfall which results from a significant increase in costs, new demands on the Division (e.g., predator control, failure-to-report requirements, allocation of permits to guided clients, etc.) and vastly decreased availability of banked revenue from hunting license and tag sales. Hunting license sales do not increase with inflation. Revenue into the Fish and Game Fund from hunting license sales was the same or less in 2006 than it was in 2000. In the absence of growth of such funding, critical Division functions such as game population inventories cannot be adequately carried out. Without the capability to do such work, this will lead in time to fewer hunting opportunities as managers must exercise greater caution in the face of incomplete or outdated information.</i>

FY2008 AMD: Risk management cost savings	Dec	-0.7	0.0	0.0	-0.7	0.0	0.0	0.0	0.0	0	0	0
<i>According to Department of Administration, the risk management premium for vessels is going down in FY08 and the Department of Fish and Game's share of the statewide reduction is \$14.5. Risk management costs for vessels are spread across three divisions within Fish and Game. Commercial Fisheries incurs approximately 90% of the costs or \$13.1. Commercial Fisheries uses general funds to cover risk management costs. Sport Fisheries and Wildlife Conservation each incur approximately 5% of the risk management premium cost on vessels or \$0.7 for each division. Both divisions use Fish and Game fund to cover their risk management costs.</i>

Wildlife Conservation (continued)												
FY2009 Sustain Game Management Activities for Wildlife Conservation (continued)												
<i>The Division of Wildlife Conservation (DWC) will continue to collect biological data required to sustain existing and proposed predator management activities as well as address game management needs statewide.</i>												
<i>Capital funding for intensive game management projects was received in the amount of \$1,600.0 by DWC in FY07 and \$2,000.0 in FY08. These funds have been allocated internally for a 3-year timeframe to ensure funding for multi-year wildlife research projects, but the expenditures are significantly "frontloaded" to cover the extensive amount of work required immediately under the Intensive Management Law. In order to maintain intensive management research and studies at levels that will allow the state to sustain predator management programs and meet prey population objectives, a continued appropriation is needed.</i>												
<i>Under A.S. 16.05.255, the department is charged with carrying out intensive game management programs adopted into regulation by the Board of Game. Under these regulations, five such programs are currently underway to boost the harvestable surpluses of moose and caribou populations and provide increased hunting opportunities for Alaskans.</i>

FY2011 Intensive Predator Management Field Operations	Inc	250.0	20.0	10.0	200.0	20.0	0.0	0.0	0.0	0	0	0
<i>This increment provides funds to carry out focused predator management by the division in game management units (GMU) identified by the Board of Game under the Intensive Management (IM) statute. Teams of division employees specifically address low ungulate populations through the reduction of predators to accomplish the board's reduction objectives, directed by the IM statute.</i>												
<i>The division engaged in three state-sponsored predator reduction operations during FY09; GMU 12 and 20E (north of Tok), and the Southern Alaska Peninsula Caribou Herd (SAPCH), and Unit 16 Bears. The operational costs were paid by one-time CIP appropriations. Recent field operations for predator control by the division reveals operating costs between \$100.0 and \$125.0 for a two to three week effort in each area. Three operations will be active during FY11, each necessitating helicopter support costs between \$50.0 and \$100.</i>												
1004 Gen Fund (UGF)		250.0										
FY2011 Federal Authority for Wildlife Population Assessment and Species Research	Inc	3,100.0	550.0	115.0	1,985.0	450.0	0.0	0.0	0.0	0	0	0
<i>Funding through the Pittman-Robertson Wildlife Restoration program is available through an annual grant agreement from the U.S. Fish & Wildlife Service. The program receives its receipts from federal excise taxes on guns and firearms. Sales nationwide on guns and firearms increased dramatically over the past twelve months. Funds collected are distributed to states annually for propagation and management of wildlife.</i>												
<i>The Division has increased its efforts to accomplish wildlife population surveys and field research starting in FY07 and continuing through FY09. Funding was appropriated through two CIP appropriations for Game Management, one in FY07 and one in FY08. The appropriations, although technically capital, have funded operating projects for the division. Once the appropriations are expended, the work supported by the funding cannot be supported. The appropriations total \$3.6 million and will be 85% spent by the end of FY10. The increased effort by regional biologists over the past 2 years can be maintained into FY11 by an increase of federal spending authority to this component.</i>

Wildlife Conservation (continued)												
FY2011 Endangered Species Act Listings												
Coordination (continued)												
<i>agreements (RSAs), necessary consultations with the Departments of Natural Resources, Environmental Conservation, and Commerce, Community, and Economic Development. Finally, it supports inflationary costs to support the Department of Law involvement in the ESA program.</i>												
 <i>Congress passed the ESA as a tool to assure that species would not go extinct. It was meant as the ultimate safeguard and has been used successfully to prevent species extinctions, especially in cases where the threats to species survival are easily identifiable and manageable. An example was the Aleutian Canada Goose, where the main threats were over-harvest and predation by foxes, both of which were easily identifiable and manageable. This species was recovered and removed from the ESA. Up until recently, the act has been sparingly used in Alaska.</i>												
 <i>However, in the last several years, more species in Alaska have been listed including the polar bear and beluga whales in Cook Inlet. These species were listed based on assumed projections of decline associated with anticipated climate change or population trends over long periods. Also, new listing reviews have been initiated for the Yellow-billed loon, Kittlitz's murrelet, marbled murrelet, four species of ice seals, Pacific walrus, and Southeast Alaska herring.</i>												
 <i>Once a decision is made to list a species, the ESA specifies that critical habitat must be designated. This requires balancing biologic needs associated with species recovery against economic issues. A recovery plan must be prepared that specifies recovery objectives and research needs. Also, federal consultations occur on any project that has a federal nexus or results in a take of a listed species.</i>

FY2012 Newly Created Wildlife Region IV Leadership Positions	Inc	200.0	200.0	0.0	0.0	0.0	0.0	0.0	0.0	0	0	0
<i>The south-central section of the state was divided into two distinct subunits as of July 1, 2010. The new Region IV includes offices in Glennallen, Palmer, Dillingham, and King Salmon. Leadership positions were established for the new Region by OMB through a revised program (RP) memo, ADN 11-0-0623 in May 2010. The RP described that about 60% of the cost of the positions and start-up would be supported by federal funding from an increment for wildlife management authorized for FY11. The activities performed by leadership positions for a region in the division are not fully eligible for federal Wildlife Restoration funding. Project accountability guidelines for leadership positions requires general funds for staff assignments specifically related to predator control, nuisance wildlife management, wildlife regulation enforcement, and administration. For FY11, the division will access available general funds held by an existing CIP appropriation established for game management, AR 43459. This is a one-time source available during FY11. The increment for FY12 requests the \$200.0 be made part of the component's base budget.</i>

FY2013 Spatial Analysis of Fish and Wildlife Data and Resource Development	Inc	150.0	95.7	12.3	42.0	0.0	0.0	0.0	0.0	0	0	0
<i>The State of Alaska supports resource development across the state, including North Slope oil and gas projects. Alaskans are supportive of these development projects that not only include oil and gas extraction, but also the transportation systems necessary to get the energy to markets, both in-state and out of state. At the same time, Alaskans demand protection of fish and wildlife and their habitats for hunting, food, subsistence and culture. In some cases spatially-based conservation measures may be desirable to ensure that there are no additional Endangered Species Act (ESA) listings that hinder development.</i>												
<i>The division has limited spatial data analysis capability. The division's Information Services program provides excellent public service to hunters and hunting related topics, but there is no programmatic statewide spatial approach for consolidating, managing and disseminating wildlife data and information. The division often fails to provide the Habitat Division, industry, federal agencies, non-governmental organizations and the public with information on subjects like important big game areas, wildlife corridors, wintering areas and calving grounds because our data has not been summarized in a useable, geospatial format. The division is significantly behind state fish and wildlife agencies such as Montana, Arizona, and Washington who have online tools available that can display summary fish and wildlife information concurrent with development projects.</i>

FY2013 Assessments in Game Management Units 15A & 15C for Intensive Mgt to Improve Moose Population (FY12-FY14 & Terms 6/30/14) (continued)												
<i>This was added by the Legislature as a one-time item for FY2012 and the division initiated field activities during the fiscal year. The original proposal called for multiple years of activity to accomplish wildlife management outcomes. This is a 3-5 year project that is consistent with department priorities. This will restore funding in the base budget for FY2013.</i>												
<i>This one time item included a full-time position and the department is currently recruiting for PCN 11-2292 in Anchorage, Soldotna and Homer.</i>												
1004 Gen Fund (UGF)		300.0										
FY2014 Replace General Fund Program Receipts with Fish and Game Funds to Comply with Federal Regulations	FndChg	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0	0	0
<i>Receipts from patrons of the sanctuaries and sale of waterfowl prints will be deposited into the Fish and Game Fund instead of the general fund as program receipts. Federal regulations require states participating in Wildlife Restoration and Sport Fish Restoration programs to use income generated with license revenues exclusively for fish and wildlife purposes. The Department received a federal audit finding regarding shooting range fees that can only be addressed by depositing range income directly into the Fish and Game Fund. The Department has similar audit vulnerability with sanctuaries fees and revenue from waterfowl prints.</i>

<i>The Department expects an increase in available federal funding from the Pittman-Robertson Wildlife Restoration program. The program derives its receipts from federal excise taxes on the manufacture of guns, firearms, archery equipment, and ammunition. Sales nationwide on firearms and ammunition increased dramatically over the past twelve months. Funds collected are distributed to states annually for propagation and management of wildlife. A match is required from non-federal sources.</i>												
<i>Wildlife Restoration projects' purpose is the restoration, conservation, management, and enhancement of wild birds and wild mammals, and the provision for public use of and benefits from these resources. The Division of Wildlife Conservation (Division) will further enhance its statewide work through the staffing of three additional biometricians to concentrate on the scientific merit of the division's research programs. The Division will monitor wildlife diseases to insure baseline data is maintained. Wildlife education support for the Mat-Su region will be enhanced through the funding on an existing vacant position. The division will enhance its data management capacity for harvest information and will establish a lead data manager position.</i>

FY2007 Increase federal funds for Satellite Tracking of Bowhead Whales <i>Grant funding has been obtained from the Minerals Management Service, U.S. Department of Interior, for a study titled Satellite Tracking of Bowhead Whales. Current information indicates the western Arctic stock of bowhead whales winter in the Bering Sea and migrate through the Chukchi and Beaufort seas in spring to feed in eastern Beaufort before returning to the Bering Sea in late fall. It is not known where in the Bering Sea bowheads winter, if they feed in wintering areas, and if they segregate by sex and/or age during winter.</i> <i>This study will work with Alaska Native subsistence whalers to cooperatively deploy 25 satellite tracking tags per year for the next four years on bowhead whales. Satellite telemetry will allow individual whales to be tracked year-round providing information regarding distribution, movements and migration, and important feeding, summering, and wintering areas.</i> <i>This increment addresses our strategy of collecting scientifically sound information on wildlife populations in Alaska. This effort will significantly increase the department's knowledge about bowhead whales and their movement</i>	Inc	300.0	89.6	24.0	82.1	104.3	0.0	0.0	0.0	1	0	0

FY2008 Change Fund Source for WC Special Projects by reducing SDPR and adding CIP Receipts	FndChg	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0	0	0
A technical update to this component is needed to recognize the ongoing need to budget for CIP Receipts in the Wildlife Conservation Special Projects component. The Division has not budgeted for revenue in this category in FY06, but incurred \$145.2 of expenditures for positions paid from CIP appropriations. For the next two fiscal years, staff within the division will be paid in part with CIP appropriations for game management and from several CIP RSAs.												
The division expects less revenue from the funding source, Statutory Designated Program Receipts (SDPR) in FY08. A reduction will more accurately depict the expected amount of revenue from agreements with non-governmental organizations.

FY2008 AMD: Prince William Sound Harlequin Duck Studies	Inc	100.0	0.0	10.0	80.0	10.0	0.0	0.0	0.0	0	0	0
Harlequin duck populations in Prince William Sound (PWS) have not recovered from the effects of the 1989 Exxon Valdez Oil Spill. Two studies are planned for FY08.												
1) Harlequin Duck Population Dynamics in PWS - The division will continue this study by conducting winter boat surveys to test harlequin duck populations by comparing oiled and unoiled treatments in four areas of PWS.												
2) Assessing Potential Oil Exposure to Harlequin Duck Populations in PWS. Passive sampling devices will act as surrogates for plumage oiling and potential ingestion of contaminated prey and serve as indicators of oil exposure to harlequin ducks. Sampling will occur in late-winter/early spring before birds migrate to breeding areas.

<i>During the 2005 legislative session, the House Finance Committee added \$150.0 of Interagency (I/A) receipt authority to Wildlife Conservation Hunter Education with the intent that it would increase the spending capacity of the Shooting Ranges. I/A Receipts are those funds received from other State agencies for requested services. Other State agencies have not and are not expected to request services from the Shooting Ranges. Any additional receipts from patrons affiliated with municipal agencies or non-profits will be receipted at the range facilities using the Fish and Game Fund. The I/A spending authority is unrealizable.</i>

<i>Receipts from patrons of the shooting ranges should be deposited into the Fish and Game Fund instead of the general fund as program receipts. Federal regulations require states participating in Wildlife Restoration and Sport Fish Restoration programs to use income generated with license revenues exclusively for fish and wildlife purposes (50 CFR 80). The Department received a federal audit finding regarding this program income that can only be addressed by depositing range income directly into the Fish and Game Fund. A corresponding language section will deposit range revenue for both FY2013 and FY2014 into the Fish and Game Fund.</i>

FY2010 AMD: Additional indirect receipts from Wildlife Conservation and Sport Fisheries projects	Inc	300.0	55.0	15.0	200.0	10.0	20.0	0.0	0.0	0	0	0
<p><i>The Division of Administrative Services (DAS) expects to be short on interagency receipt (I/A) authorization in the FY10 operating budget due to unanticipated indirect receipts from Wildlife Conservation (WC) and Sport Fisheries (SF). DAS collects 7.5 percent indirect receipts on WC and SF federal and fish and game funded projects via RSAs as required by AS 16.05.110(b). This RSA indirect process with WC and SF is also known as SB250 indirect and it is just one portion of I/A receipts.</i></p> <p><i>In FY08, DAS was authorized \$4,969.7 of I/A receipts authorization and collected \$4,842.6 of I/A receipts. In FY09, the I/A authorization remains roughly the same, but SB250 indirect is expected to increase. In FY10, DAS anticipates having no excess I/A receipt authorization to accommodate the additional indirect. This increment will avoid unbudgeted RSAs being submitted to the Office of Management and Budget. The indirect is spread to various line items to cover anticipated administrative costs.</i></p>

Fish and Game Boards and Advisory Committees												
FY2007 Increase state funds to meet Advisory Committee system statutory meeting requirements	Inc	118.0	0.0	98.0	18.0	2.0	0.0	0.0	0.0	0	0	0
<p><i>This additional funding will improve the regulatory process and will allow the Fish and Game Boards and Advisory Committees to achieve its mission. It will serve to maximize public participation in developing and evaluating regulations for the use of fish and wildlife resources by involving the public in the advisory committee process. This increase will benefit all advisory committees statewide. Due to budget cuts over the past five to six fiscal years, Advisory Committees (ACs) have been limited to one meeting per year. The ACs have not been able to meet their responsibilities of preparing proposals for both the Fisheries Board and Game Board arenas, let alone comment on proposals that are in both boards.</i></p> <p><i>The ability of the advisory committees to participate in the board regulatory system has suffered. New funding levels will enable the department to fully serve the general public as well as the advisory committees with their participation in the board meetings. By increasing the amount of funds available for the ACs to meet twice per year, their input into the regulatory system will be more robust and meaningful, as the regulations originally envisioned.</i></p>

FY2006 General fund increase to meet statutory mandates												
	Inc	100.0	14.0	19.2	66.8	0.0	0.0	0.0	0.0	0	0	0
<i>The Boards of Fisheries and Game need a general fund increase to ensure meeting their independent and joint statutory mandates. Increased funding will benefit all regions of the state, as both boards will resume meeting in regions and communities of the state, and will provide the boards sufficient time to take public testimony before fully deliberating and adopting regulations. Specifically, the increased funding will more adequately provide for costs associated with travel to regional areas; staff time, board meeting time, and meeting facilities. The increased funding will also assist the boards to further meet statutory requirements associated with publication of proposals, amended regulations, and public comments by Advisory Committees and individuals.</i>

<i>Federal receipts: Prior to each state fiscal year, the division submits proposals to 5 different Federal agencies and 10 Federal programs to receive contracts, grants, and cooperative agreements. As the division receives numerous contracts and grants from Federal awards, each contract is written for a specific amount, period of performance and includes specific deliverables. The division cannot receive an increase in funding amounts from any federal funding agencies. Based on past attempts, it is not likely that a federal funding agency would approve a contract modification for a reduction in the scope of work and work products to accommodate increase state operational costs.</i>													
<i>Interagency (I/A) Receipts: The division performs core services for other divisions in the department through interagency receipts. The other divisions would need to receive an increment in order to provide additional funds to the servicing agency or division.</i>													
<i>Exxon Valdez Oil Spill (EVOS) Receipts: Projects are approved by the EVOS Trustee Council for a certain dollar amount. Personnel cost increases associated with the GGU increment would either have to be born by the EVOS authority or supported by general fund. The original proposal was submitted prior to salary cost increases and would need revision to adjust the scope of work and deliverables if general fund support is denied.</i>													
<i>Capital Improvement Program (CIP) Receipts: Subsistence receives funding from a variety of capital projects, although primarily the Pacific Coastal Salmon Recovery Fund (PCSRF). Under the PCSRF program the total available funding is decreasing and there are limited additional discretionary PCSRF funds available, so an increase in CIP authority will not translate into additional money.</i>													
<i>Statutory Designated Program Receipts (SDPR): The division receives funding from private businesses, nonprofit organizations, and the North Pacific Research Board to conduct research on a variety of projects through the SDPR. As with other research projects, the funds are received after a favorable competitive bid process typically over a year before contracts are awarded. Any change in costs would result in a contract change, requiring renegotiating the contract terms. This affects the original competitive bid award, and is not viewed favorably.</i>

FY2009 Make existing Subsistence Salmon Harvest accessible in an Integrated Web-Based Interface (continued)												
<i>The existing subsistence salmon harvest database will be made accessible in an integrated web-based interface so information is readily accessible to managers, the Board of Fisheries, and the public to address harvest opportunity requests.</i>												
<i>The Statewide Subsistence Salmon Harvest Database is the department's primary source of subsistence salmon harvests in the state compiled from a variety of survey and permit programs of the divisions of Subsistence and Commercial Fisheries. It meets the department's core services and initiatives for customer service and public involvement by providing information for decision-making to increase harvest opportunities.</i>												
<i>The funding is used to make the database accessible in an integrated web-based interface. This improved accessibility to harvest data enables staff to and the public to easily retrieve and analyze data, so managers and Board of Fisheries can address harvest opportunity requests with the best available information. The Board of Fisheries and the public rely on harvest enumeration data as one important component for evaluating trends in fisheries, salmon run abundance, and effectiveness of management actions.</i>												
<i>The funding provides for research analysts and a programmer to make the database accessible in the web-based interface and to purchase associated software. The result is that the best available information can be readily accessed by staff and used to produce complete and timely information, and allows the public access to the information in an easy-to-use format. The division and department has had considerable success in recent years by making similar data sets available in the web-based interface, providing information in an easy-to-use and access format for use by all.</i>

State Subsistence Research (continued)												
FY2011 An Index Community Approach to Estimate/Monitor Subsistence Harvests of Fish and Wildlife in Alaska (continued)												
<i>subsistence harvest of fish and wildlife in all areas of the state, and thereby provide critical updates needed by the state fish and game regulatory boards. Without this information, harvest data will become dated and less reliable, which may lead to regulatory restrictions to other harvest opportunities (commercial, sport, and general uses). Increment funds would provide start-up support, with future efforts anticipated to adequately support representative and timely harvest data surveys.</i>												
<i>Due to the large number of communities and high costs, it is not possible to update comprehensive data for most communities on a regular basis. Therefore, a set of index communities will be selected to represent areas of the state. Comprehensive surveys will be conducted on a regular, rotational schedule in these communities, and results will be used to estimate total harvests in the area which the index communities represent. The program will provide annual estimates of statewide subsistence harvests and trends, including harvest quantities, locations of harvests, and numbers of harvesters and users. The program can be supplemented with special project funds to add additional communities to the on-line Community Subsistence Information System (CSIS).</i>												
<i>Implementation of the project will proceed in two steps. Because data are lacking in key regions (interior and western) and are more than 20 years old in many of the communities in other regions, in the first two years, comprehensive surveys will be conducted to fill in gaps to support the development of a scientifically sound design for long-term annual monitoring with the index community approach. Based on currently available data in the CSIS and new data collected as part of this project, a set of communities will then be selected that represent the harvest patterns of others within their regions. Until the analysis is completed, it is not possible to state precisely how many communities will be needed or how many years will be necessary to complete a single rotation of surveys across the state. In subsequent years, comprehensive surveys will be undertaken and an annual report produced with regional and statewide harvest estimates based on the index community results.</i>

FY2013 Harvest Surveys that Identify Subsistence Use Patterns	Inc	317.1	296.1	15.0	5.0	1.0	0.0	0.0	0.0	0	0	0
<i>This funding will help rebuild the capacity of the division to identify, track, and respond to resource issues connected with both the regulatory process and development opportunities. This is accomplished by conducting harvest surveys that identify subsistence use patterns. These data are important to meet the obligation to provide for the subsistence priority. In addition, developing the capacity to rapidly respond to data needs will enhance the division's ability to support the state's development initiatives.</i>												
<i>Results from household and community surveys are reported to the Boards of Fisheries and Game. Some information is as old as the 1980's and needs to be updated. Surveys are conducted by adding months to existing seasonal positions as well as contracting with some community workers.</i>

FY2013 Five Year Harvest Study on Lower Kuskokwim Caribou (FY12-FY14 & Terms 6/30/14)	IncT	60.0	30.0	10.0	19.0	1.0	0.0	0.0	0.0	0	0	0
<i>A five Year Harvest Study on Lower Kuskokwim Caribou was added by the Legislature as a one-time item for FY2012. The project was initiated in FY2012. This is a three to five year project that is consistent with department priorities. This high priority project will document subsistence harvests of caribou by residents of lower Kuskokwim River communities and prepare annual harvest reports. This will restore funding in FY2013 to continue this project.</i>

FY2006 Support Applied Research Projects throughout State	Inc	50.0	40.0	5.0	0.0	5.0	0.0	0.0	0.0	0	0	0
<i>This request is to support applied research projects throughout the State. One example would be a 5-year field sampling program on the Power Creek hydro project, specifically looking at the Dolly Varden resident population upstream of the power plant intake. Similar fish population issues also exist on the proposed Kensington project. Field study results would be used to support a variety of small projects throughout the State, with the intent to ensure better, more informed permitting decisions. This request fits under a couple of the Governor's priorities, including: bring new mines into development, and bring back (or in this case, ensure) the economic viability of salmon and other fisheries. In addition, in an ancillary way, it could help speed up permit review - that is, if we have the ability to fund specific research, our permitting decision could be better and more timely.</i>

--	--------	-----	-----	-----	-----	-----	-----	-----	-----	---	---	---

The following other fund sources do not have revenues to support the pay and health increases so the fund sources need to be changed to GF.

I/A Receipts: These receipts are related to Reimbursable Services Agreements (RSA). Increasing I/A receipt authority is in essence, empty authorization unless increments are provided to each RSA requesting agency as well. The empty authorization results in the servicing agency absorbing the increased administrative cost which translates to a reduction of programmatic funds.

Federal Receipts: These receipts are related to Federal projects. Increasing Federal receipt authority is in essence, empty authorization unless increments are provided by Federal agencies. The empty authorization results in Habitat absorbing the increased administrative costs which translates to a reduction of programmatic funds.

IA/Oil HAZ Receipts: These receipts are related to a RSA we receive from Department of Environmental Conservation. In FY12, we know we will not be getting additional funds for this project. The empty authorization results in Habitat absorbing the increased administrative costs which translates to a reduction of programmatic funds.

CIP: These receipts are related to personal service charges against capital projects. Increasing CIP receipt authority is in essence, empty authorization as the capital projects are for a fixed amount. The empty authorization results in Habitat absorbing the increased administrative costs related which translates to a reduction of programmatic funds.

FY2013 Documenting Anadromous Waters in Southeast Alaska	Inc	109.2	109.2	0.0	0.0	0.0	0.0	0.0	0.0	0	0	0
<i>Habitat is responsible for protecting and cataloging anadromous fish streams in Alaska. This request will allow Habitat to accept Alaska Sustainable Salmon Funding (AKSSF) for projects such as Documenting Anadromous Waters in Southeast Alaska and other areas of the State.</i>												
<i>Habitat is currently doing the work with AKSSF funds for the Juneau, Haines, Skagway area but they are anticipating getting additional funds to do the same type of work in the Central Region of the State as well as the rest of Southeast Alaska.</i>

FY2013 Title 16 and Title 41 Pre-Project Reviews, Permitting, Monitoring, and Compliance	IncOTI	185.0	105.0	70.0	10.0	0.0	0.0	0.0	0.0	0	0	0
<i>Habitat reviews activities and issues permits for a variety of projects of importance to Alaskans including mining, public works, oil and gas, hydro-power, and transportation. The Title 16 and Title 41 permit workload continues to increase, but Habitat funding for these review activities has decreased with the loss of the Alaska Coastal Management Program funds (\$100.0) and the Forest Resources and Practices Act funds (\$85.0). This federal funding was received as inter-agency receipts from other agencies. This increment would cover these other lost funds. Permitting and monitoring activities are a fundamental component of resource development in the state.</i>

FY2008 Update Gulf of Alaska Groundfish Research & E-Landings Technology	Inc	45.0	0.0	0.0	5.0	40.0	0.0	0.0	0.0	0	0	0
<i>CFEC needs to upgrade seven (7) plastic card embosser units to be compatible with new electronic fish ticket landing technology for a total of \$45.0. This change will generate continuing expenses in future fiscal years through card stock requirements and consumables and with the additional media types, a maintenance contract will be necessary to keep the machines functioning. In cooperation with the ADF&G E-Landing Program, CFEC will have to change data technology to one that lends itself to electronic reporting, such as mag striping and/or bar coding. This would allow more information to be stored on the card, ensure real-time validation of the permit holder during a landing and remove the data entry errors, and more importantly, communicate with other fishery management agencies.</i>

FY2008 AMD: Funding adjustment for efficiencies	FndChg	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0	0	0
<i>Currently, Commercial Fisheries Entry Commission (CFEC) receipts are located in CFEC and Commercial Fisheries which makes it difficult to accurately budget, especially when CFEC revenue is expected to decline in future years. This funding change moves GF out of CFEC and into Commercial Fisheries and moves CFEC receipts from Commercial Fisheries into CFEC. This will make budgeting within CFEC easier in future years.</i>
